

Boston – New York – Washington, DC (NEC)

The Northeast Corridor (NEC) between Boston, New York, and Washington, DC is the most heavily trafficked rail corridor in the country, but also has some of the oldest infrastructure in need of improvement.

Through more than \$1 billion in federal investments, construction work is now underway to significantly reduce congestion and begin to modernize outdated infrastructure, which dates back to the 19th century in some locations. Federally-funded planning grants are also laying the foundation for future investments that will continue to reduce the maintenance backlog and bring the NEC back to a state of good repair.
