EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/16/2014 has revealed that there are 4 NPL sites within approximately 1 mile of the target property.

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there are 8 CERCLIS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 13 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/10/2015 has revealed that there are 16 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/10/2015 has revealed that there are 11 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity

EXECUTIVE SUMMARY

generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>INTERNATIONAL METALL</i>	<i>196 BLANCHARD STREET</i>	<i>SW 1/8 - 1/4 (0.168 mi.)</i>	<i>E21</i>	<i>310</i>

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 03/16/2015 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

NJ HWS RE-EVAL: The locations were removed from the Known Contaminated Sites list for a variety of reasons. Some of the sites were taken off the list because they were inactive, some were not assigned a case worker and some were no longer contaminated. Inspectors from the DEP are now undertaking a full re-evaluation of each of the locations statewide. That includes visual and environmental tests to see whether contamination still exists.

A review of the NJ HWS RE-EVAL list, as provided by EDR, and dated 09/20/2007 has revealed that there are 12 NJ HWS RE-EVAL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

NJ PF: This report focuses on publicly funded cleanups and features progress achieved & underway at all sites that are being addressed by NJDEP with public funds.

A review of the NJ PF list, as provided by EDR, and dated 12/31/2003 has revealed that there are 2 NJ PF sites within approximately 1 mile of the target property.

State and tribal Brownfields sites

NJ BROWNFIELDS: Brownfields are identified as former or current commercial or industrial use sites that are presently vacant or underutilized, on which there is suspected to have been a discharge of a contamination to the soil or groundwater at concentrations greater than applicable cleanup criteria.

A review of the NJ BROWNFIELDS list, as provided by EDR, and dated 12/03/2012 has revealed that there are 52 NJ BROWNFIELDS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 15 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NJ HIST MAJOR FACILITIES: 'Major Facility' means all facilities, located on one or more contiguous or adjacent properties owned or operated by the same person, having total combined storage capacity of: 1) 20,000 gallons or more for hazardous substances other than Petroleum or petroleum products; 2) 200,000 gallons or more for hazardous substances of all kinds. This file contains detail information that is no longer available by the Department of Environmental Protection due to security concerns.

A review of the NJ HIST MAJOR FACILITIES list, as provided by EDR, and dated 01/02/2002 has revealed that there are 6 NJ HIST MAJOR FACILITIES sites within approximately 0.5 miles of the target property.

NJ ISRA: The ISRA process begins with determining if the Act applies to your type of business and transaction. The provisions of ISRA only apply to industrial establishments. What is an industrial establishment? The term "industrial establishment" refers to the type of business operations and transactions that would subject a facility to review under ISRA. An industrial establishment must meet each of the following three criteria: The place of business or real property at which such business is conducted, having a North American Industry Classification System (NAICS) code listed in N.J.A.C. 7:26 B - Appendix C subject to the specified exceptions and limitations. The place of business must have been engaged in operations on or after December 31, 1983; and The place of business must involve the generation, manufacture, refining, transportation, treatment, storage, handling, or disposal of hazardous substances or hazardous wastes.

A review of the NJ ISRA list, as provided by EDR, and dated 04/09/2015 has revealed that there are 18 NJ ISRA sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NEWARK COAL GAS (PSE)	155 RAYMOND BLVD	SSW 1/2 - 1 (0.621 mi.)	AG201	1471

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 3 EDR US

Summary Details:

Conditions at listing September 1983): The Diamond Alkali Co. Site occupies about 1 acre immediately adjacent to the Passaic River, in Newark, Essex County, New Jersey. From 1943 through 1968, the company manufactured numerous chemicals on the site, including 2,4,5-trichlorophenol, which is likely to contain dioxin as an impurity. Extensive sampling conducted by EPA and the State has detected extremely high concentrations of dioxin on and off the site. EPA and the State have covered the area of major contamination with plastic tarpaulins. Adjacent transportation routes and residential areas were swept and vacuumed. Workers may have been exposed to dioxin during normal operations, as well as during renovations conducted during the summer of 1982. Another company has since purchased the land. The area is both densely populated and heavily industrialized. Municipal water is drawn from the Wanaque Reservoir, roughly 35 miles from the site. Status June 1984): On March 13, 1984, the State and Diamond entered into an Administrative Order on Consent for a remedial investigation/feasibility study and for on-site cleanup.

Site Description: The 80 Lister Avenue property is located in the Ironbound section of Newark, New Jersey. The property occupies approximately 3.4 acres on the north side of Lister Avenue. It is nearly rectangular in shape, extending about 373 feet in an east-west direction and 405 feet north-south. The property is bounded on the north by the Passaic River, on the east by the formal-Sergeant Chemical Company

(120 Lister Avenue) site subsequently purchased by Diamond Shamrock, at the southeast corner by the Duralac Company property, and on the south and west by Sherwin-Williams Company property. Vehicular access to the property is via a common right-of-way shared with Duralac entering the southeast corner of the property. The property is formally described as Lots 56 and 59 in Block 2438 on the Newark tax maps. As an industrial area that has been occupied for over 100 years, the entire site has been built up with fill. Approximately 6 to 8 feet of cinders, bricks, sand, and rubble have been placed over natural materials. In this process, the site has been intentionally leveled. Total relief across the site is approximately 3 feet with the lowest point along the railroad tracks at the southern boundary. Elevations vary between approximately 7 and 10 feet mean sea level (MSL). Much of the site has been covered with either pavement or gravel. The site is located in the Lower Valley portion of the Passaic River drainage basin. The Lower Valley is the southeasterly portion of the basin lying between the Central Basin and the mouth of Newark Bay. It is characterized as a flat relatively narrow floodplain of 1,000 to 2,000 feet in width, abutting low rolling hills. From Dundee Dam to the mouth of Newark Bay, the river is a tidal estuary and is navigable. The site is approximately three miles upstream from the mouth of Newark Bay. The closest known surface water gauging station on the Passaic River is at Little Falls, New Jersey, which is approximately twenty-six river miles upstream from the site. The gauging station is also upstream from the Dundee Dam, and therefore, river elevations at this station are much higher than river elevations at the site, and thus are not representative of site conditions. Industrial development on the site is reported to date from the 1870's. Drawings from 1914, revised in 1922, show the site to be part of the Lister Agricultural Chemical Company property which extended for some distance along the Passaic River. This plant site also included most of the other nearby industrial sites. It was during the period of ownership by Lister that the site reached its present dimensions following filling along the south shore of the Passaic River to form the northernmost 30 percent of the property. Much of the remainder of the site is also filled with the granular material reportedly used to fill the marsh land that existed in the natural state. Several buildings were on the site including the Lister power plant, which remains today as the chemical manufacturing building. When Lister Agricultural Chemical Company ceased operations the property was subdivided largely along the lines that form the present property boundaries and was sold. A 1.8-acre parcel (the northeast portion of the present site) was eventually acquired by the Kolker Chemical Works, Inc., which, by the mid-1940's, was operating an agricultural chemicals plant on the site. This was the beginning of the manufacturing operations that are related to the current conditions at the site. Kolker was an early producer of both dichlorodiphenyl trichloroethane (DDT) and the phenoxy herbicides. The exact dates when manufacture started is not known, but it is believed that DDT production was underway before the end of World War II and that herbicide production started by 1948. In addition to DDT and the phenoxy herbicides, other products of interest produced on the site included hexachlorobenzene (HCB), ovex (a miticide), Lindane and low gamma-benzene hexachloride (low gamma-BHC). Several derivatives of benzene sulfonyl chloride and sulfonates were also made, but these were all low volume products. In all cases, manufacture started with readily available raw materials and the principal intermediates were made on the site. The principal products made on the site by Kolker were DDT and the phenoxy herbicides. Ownership by Kolker ceased in March 1951 when the Kolker Chemical Works was acquired by Diamond Alkali Company (Diamond Shamrock Chemicals Company). During this period the manufacture of several products was either transferred to other locations or discontinued, leaving the phenoxy herbicides as the only products of the plant. A major impetus for this change was an explosion in February 1960 which

DIAMOND ALKALI CO. (Continued)

1000301205

destroyed several plant processes. When rebuilt the plant only included processes for the manufacture of the phenoxy herbicides and their intermediates. Modernization and expansion continued during the 1960's, more than doubling total phenoxy capacity, to 15 million pounds per year. The changes started in 1955 with the transfer of Lindane manufacture to another location. Production of low gamma-BHC continued until 1957 or 1958 when it also was relocated. The biggest change, however, was the transfer of DDT production, which was moved to Texas in late 1958 or early 1959. During the late 1950's several process changes were instituted to improve the operating efficiency of the plant. Among these was a change instituted around 1956 to the trichlorophenol (TCP) process effluent with the installation of an industrial sewer connecting to the Passaic Valley Sewerage Commission (PVSC) Lister Avenue line. Following installation of that connection, most of the plant process wastes were discharged through the PVSC treatment plant. An explosion in the TCP unit during February 1960 destroyed the large five-story building in which it and several other plant processes had been located. Following the explosion, a decision was made to limit future production to the phenoxy herbicides, ending output of HCB, ovex and the benzene sulfonyl chloride derivatives. A larger site was required for rebuilding the plant on the scale desired, so an adjacent 1.6-acre parcel (consisting of the southwest portion of the present site) was leased from the Triplex Oil and Refining Company (later Walter Ray Holding Company). This site, which had been used for reclaiming oil, contained several buildings and large tanks which were razed to permit installation of a new laboratory and office building, a maintenance shop/warehouse building, and a tank farm for flammable raw materials along the west side of the property. Following demolition of the remains of the damaged building, a new process building devoted to the manufacture of sodium trichlorophenol (NaTCP), 2,4-dichlorophenol (2,4-DCP), monochloroacetic acid (MCA), and by-product hydrochloric acid (HCl) was erected along the river near what had been the north end of the old building. Following this construction, the manufacture of the intermediates was carried out in the new buildings, leaving the old but undamaged chemical manufacturing building for the production of 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5,-trichlorophenoxyacetic acid (2,4,5-T), and their esters and amines. The process building remains largely unchanged to this day. The only addition was equipment installed in 1967 to purify the NaTCP by removing dioxin. The period 1963 to 1967 saw several major projects in the 2,4-D and 2,4,5-T manufacturing areas which were designed to improve working conditions, improve product quality, and expand capacity. Operation at the plant continued until August 1969 when it was shut down. The production units were cleaned out as they were shut down, and between September and December the remaining raw materials and products were sold and shipped. The plant was listed for sale and remained idle throughout 1970 until it was purchased by Chemicaland Corporation in March 1971. It is noted that Chemicaland actually purchased the 1.8 acres and improvements owned by Diamond Shamrock, which then assigned rights to the 1.6 acres it had leased from Walter Ray Holding Company to Chemicaland. Following purchase of the property by Chemicaland, equipment was installed for the manufacture of benzyl alcohol which was to be made and sold by Cloray NJ Corporation, an affiliate of Chemicaland. Production of benzyl alcohol was not profitable, so an attempt was made to expand their product line by manufacturing on a toll basis. These efforts were all unsuccessful and production ceased during the summer of 1973. In September 1973, Chemicaland contracted with Diamond Shamrock to produce 2,4-D on a toll basis and started rehabilitating the plant so that it could again make 2,4-D. Rehabilitation of the plant was completed sometime during the spring of 1974 and production of 2,4-D resumed. Limited quantities of 2,4-D were produced during the summer of 1974, but none was delivered to Diamond Shamrock under the contract. Operations were suspended and the plant

staff was laid off in September 1974. Arrangements were then made by Chemicaland to produce 2,4-D on a toll basis for a second time and work resumed in February 1975. Limited quantities of 2,4-D were being produced by April 1975. Production of 2,4-D continued for the next 22 months, but output varied widely. Chemicaland scavenge equipment from unused processes such as TCP purification and 2,4,5-T for use in their 2,4-D unit and made temporary repairs to bypass failed equipment. The only major addition to the process known to have been made by Chemicaland was the Installation of a second 2,4-D reactor during May 1976. However, this addition was soon negated by the failure of the original reactor. The maximum monthly output of 2,4-D by Chemicaland was reported to be about 500,000 pounds. In November 1976, while they were considering acquisition of Chemicaland, Occidental Chemical Company assumed control of the management of the plant and continued to manage the plant until February 24, 1977, when they returned control of the plant to Chemicaland. Because Chemicaland did not have the resources to continue operating without the support of Occidental, they laid off all plant personnel and shut down the plant on February 24, 1977. The property remained idle through 1980, but the ownership changed as William Leckie (the successor to Walter Ray Holding Company) purchased the 1.8 acres owned by Chemicaland in a tax sale, consolidating ownership in his name. In March 1981 Leckie sold the site to Marisol, Inc. Little is known of the use of the property by Marisol, but eventually this company started cleaning and clearing the site. Concerning the cleanup, it is known that: - The product left in the equipment when the plant was shut down on February 24, 1977, was removed and placed in drums, of which 570 remain on site today. - Some equipment known to be on the site following the shutdown was removed. - Warehouse space and tankage was leased to SCA Corporation which used it in conjunction with waste disposal operations at their neighboring plant. The date that SCA started to use the site is not exactly known, but was prior to the summer of 1982. During the spring of 1983, SCA continued to lease and use a portion of the site, while Marisol was working to prepare the office building for occupancy. This was the situation in May 1983 when results of samples taken in April by the USEPA showed high levels of dioxin on the site and New Jersey Department of Environmental Protection (NJDEP) moved to control access to the property. Upon the discovery of the presence of high concentrations of TCDD in May of 1983, the site was evacuated and secured. All exposed soils were covered with geofabric to prevent potential migration of contamination by surface runoff and wind blown particulates. In addition, the site is guarded 24 hours per day. These provisions have been maintained and are currently in place. A Record of Decision addressing Operable Unit 1 of the site was completed in September 1987.

DIAMOND HEAD OIL REFINERY DIV (Continued)

1000301183

Diamond Head) site is located at 1401 Harrison Ave. in Kearny, Hudson County, New Jersey. Currently, the site is inactive and consists of undeveloped land that is bordered by Harrison Avenue to the north, entrance ramp M of Interstate 280 (I-280) to the east, I-280 to the south, and Campbell Distribution Foundry to the west. The site is comprised of wetland areas and drainage ditches, a small wetland/pond, a vegetated landfill area along the western border of the site, and the remnants of the former Diamond Head Oil Refinery on the eastern portion of the site. The abandoned refinery portion of the site contains various construction debris, including foundations of the former on-site building and two former aboveground storage tanks. The refinery is currently owned by the Hudson Meadows Urban Land Development Corporation (HMULDC). A portion of the site is owned by HMULDC. The Diamond Head Oil Refinery Div. was in operation from February 1, 1946 to early 1979. The facility operated under several company names including PSC Resources, Inc., Ag-Met Oil Service, Inc., and Newtown Refining Corporation. All of these companies were owned by Mr. Robert Mahler. In January 1985, Newtown Refining Corporation sold the property to Mimi Urban Development Corporation, which changed its name to Hudson Meadows Urban Land Development Corporation. During facility operations, two aboveground storage tanks and possibly underground pits were used to store oily wastes. These wastes were intermittently discharged directly to adjacent properties, including the wetland area to the south of the site, creating an oil lake. The New Jersey Department of Transportation (NJDOT) acquired the property south of the refinery on March 6, 1968. In 1977, NJDOT began construction of I-280 and was reported to have removed 9 million gallons of oil-contaminated water and 200,000 to 250,000 cubic yards of oily sludge from the lake. The material was reportedly transported to Newtown Refining Corporation's facility on Long Island to be recycled; however, there are no reports stating that this recycling process occurred. It is also reported that during the construction of I-280, an underground lake of oil-contaminated ground water was found extending from the eastern limits of the NJDOT right-of-way to Frank's Creek on the west. It is reported that, prior to abandoning the refinery, Diamond Head cleaned out the two aboveground tanks; however, there is no known documentation of this activity. From the close of operations in 1979 until 1982, the abandoned refinery was not completely fenced. During this time, it was reported that dumping of waste oils and other debris took place on site. Refinement International Co. hired Eastern Chemical Co. to clean up the refinery in May 1982. In order to do so, the material in the tanks was analyzed and found to contain polychlorinated biphenyls (PCBs) at a concentration of 206 parts per million (ppm). Subsequent analyses revealed the presence of PCBs at concentrations over 3,100 ppm. Approximately 7,500 gallons of material were pumped out of the tanks and disposed off site by a Resource Conservation and Recovery Act (RCRA) permitted Treatment, Storage, and Disposal Facility (TSDF) by Resource Technology Service. Environmental Transport also removed 27 tons of contaminated soil in May 1982. Background information indicates that previous investigations have been conducted at the Diamond Head Oil Refinery Div. site. These investigations include a sampling event conducted by the New Jersey Department of Environmental Protection (NJDEP), an Environmental Site Characterization conducted by Killam Associates, and a Site Inspection conducted by the U.S. Environmental Protection Agency (EPA) Region II Field Investigation Team (FIT). During these investigations, ground water, surface water/sediment, surface/subsurface soil, liquid waste and solid waste samples were collected. Analytical results of these samples indicated the presence of volatile organic compounds (VOCs), and semivolatile organic compounds (SVOCs), pesticides, PCBs, and metals. In December 1999 EPA conducted an Expanded Site Inspection (ESI) at the Diamond Head Oil Refinery Div. site. During the ESI, EPA collected surface/subsurface soil and ground water samples from 20 borings advanced

throughout the site. EPA also collected sediment samples from the on-site wetland/pond area as well as from the wetland area extending along the southern perimeter of the site. Analytical results indicated the presence of VOCs, SVOCs, pesticides, PCBs, and metals. An observed release to surface water is documented by chemical analyses of sediment samples collected from wetlands along the southern and western boundaries of the site. Level II concentration of lead and inc are documented to 0.19 mile of wetland frontage located along the southern perimeter of the site. Status September 2002): EPA is considering various alternatives for this site. The description of the site release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices. For more information about the hazardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry (ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at <http://www.atsdr.cdc.gov/toxfaq.html> or by telephone at 1- 888-42-ATSDR or 1-888-422-8737.

Site Description: The Diamond Head Oil Refinery site, located at 1401 Harrison Avenue, Kearny, New Jersey, near the Hackensack Meadowlands, is characterized by contamination from a former waste oil reprocessing facility. The site is comprised of a 15-acre unoccupied parcel that includes wetland areas and drainage ditches, a small wetland/pond, a vegetated landfill area along the western border, and the remnants of the former Diamond Head Oil Refinery facility on the eastern portion of the site. The parcel is bordered by Harrison Avenue (also called the Newark Turnpike) to the north, entrance ramp "M" of Interstate 280 (I-280) to the east, I-280 to the south, and Campbell Distribution Foundry to the west. The land use surrounding the site is industrial or open space/wetlands; the nearest residential area is approximately a half-mile to the west. To the south, a Municipal Sanitary Landfill Authority (MSLA) landfill, identified as the 1-D Landfill, is situated south of I-280. The 15-acre parcel is fenced. The prior site operations took place on the eastern half of the parcel; the landfilled area was once an access road to the 1-D Landfill, and a landfill mound remains from those activities that rises 10 to 15 feet above the rest of the site. Surface water drains through a drainage ditch that eventually discharges to Frank's Creek, which in turn, discharges to the Passaic River. The oil reprocessing facility operated under several company names, including PSC Resources, Inc., Ag-Met Oil Service, Inc., and Newtown Refining Corporation, from 1946 to early 1979. All of these companies were owned by Mr. Robert Mahler. During facility operations, multiple aboveground storage tanks and possibly subsurface pits; were used to store oily wastes. These wastes were intermittently discharged directly to adjacent properties to the east and the wetland area on the south side of the site, creating an "Oil Lake." In 1976, the New Jersey Department of Transportation (NJDOT) purchased several lots from PSC Resources, Inc. as part of its plans

DIAMOND HEAD OIL REFINERY DIV (Continued)

1000301183

for construction of I-280. In 1977, NJDOT removed over 10 million gallons of oil and oil-contaminated liquid and over 230,000 cubic yards of oily sludge from the area of the Oil Lake. The liquid wastes were, shipped to waste-oil recycling facilities. The oil-contaminated sludges from the bottom of the Oil Lake were excavated and placed in a series of disposal cells, one atop the MSLA 1-D Landfill, and a series of smaller cells within the right-of-way (ROW) to the highway, next to the then still-operating oil-reprocessing facility. The details of these disposal efforts are not well documented, but a simple liner and a clay-based capping material were to be part of the disposal efforts for the sludges. While the surficial Oil Lake was removed and filled, the NJDOT also reported finding an "underground lake" of oil-contaminated groundwater extending from the eastern limits of the I-280 right-of-way to Frank's Creek, west of the site. From the close of operations in 1979 until 1982, the abandoned site was not completely fenced. In 1982, during the dismantling of the oil reprocessing facility, approximately 7,500 gallons of materials were apparently pumped out of the tanks and disposed off site, and 27 tons of contaminated soil were reportedly removed from the site. It was sampling undertaken during this cleanup effort that first identified hazardous substances, including polychlorinated biphenyls (PCBs) in waste material collected from the site. Aerial photographs from 1982 show that the oil reprocessing facility infrastructure had been dismantled. The buildings and facilities associated with previous site operations were constructed on the eastern half of the site, and some remnant concrete building and tank foundations remain. In 1985, the refinery property was sold to Mimi Urban Development Corporation, which subsequently changed its name to Hudson Meadows Urban Development Corporation. The property sat idle for a number of years, at least in part because of the, alleged contamination. EPA was asked by NJDEP to evaluate the site for inclusion on the National Priorities List (NPL) in 1999. The site was added to the NPL in September 2002. In 2002, EPA began a remedial investigation and feasibility study (RI/FS) to determine the nature and extent of the problems posed by the site. In addition to the LNAPL findings discussed below, the RI found soil, groundwater, and sediment contamination attributable to the site. The RI also included a number of test trenches through the landfill portion of the site to assess the nature of the material buried there, and borings were collected along the I-280 ROW berms to confirm the presence of the buried sludges. Site studies are ongoing; for example, new groundwater monitoring wells were installed earlier in 2009 on a number of neighboring properties to fully assess the extent of the groundwater problems posed by the site. Field investigations for, the comprehensive remedial investigation of the site are expected to be complete in 2010, at which time EPA can proceed with evaluating remedial alternatives for the entire site. The Site is abandoned and fenced off. The site is included within the Kearny Urban Enterprise Zone and is slated for commercial/retail redevelopment. Groundwater underlying the site is considered by New Jersey to be Class II-A, a source of potable water. EPA has identified groundwater contamination in shallow wells on and in the vicinity of the site; however, EPA has not found any potable wells or commercial production wells in the vicinity of the site. A more comprehensive understanding of groundwater contamination problems is part of the ongoing RI/FS for the site. Residences and businesses in the area are currently using a municipal water supply. An Interim Record of Decision addressing Operable Unit 1 was completed in September 2009.

Summary Details:

Conditions at listing July 1982): Syncon Resins once manufactured paints, varnishes, and resins on a 5-acre site in South Kearny, Hudson County, New Jersey. The company closed in 1981 and declared bankruptcy. The site is situated within a coastal wetlands management area and is bordered on the west by the Passaic River, a tidal waterway. About 11,000 55-gallon drums are stored in warehouses and also in the open on the ground. Analysis indicates that many drums contain hazardous substances. Many are volatile and flammable, posing the threat of air pollution and fire. Some drums have rusted, spilling their contents onto the soil. Several bulk storage tanks suspected of containing hazardous substances are also on the site. Two unlined ponds used for subsurface disposal of process waste contain hazardous organics. A large amount of soil is contaminated, and ground water is contaminated with organic chemicals, including benzene, PCBs, and toluene. Status July 1983): In December 1982, EPA awarded a 2,115,000 Cooperative Agreement to New Jersey for 1) an initial remedial measure involving removal of surface drums and 2) a long-term feasibility study to fill any gaps in the information on ground water and to identify alternatives for remedial action at the site. The work is scheduled to be completed in the first quarter of 1984.

MAP FINDINGS

SYNCON RESINS INC (Continued)

1000179652

Alias Comments: Not reported

Site Description: The Syncon Resins site encompasses approximately 15 acres and is located in a heavily industrialized area of northern New Jersey. The site is located in Kearny, Hudson County, at approximately 40 degree 44 minutes latitude and 74 degrees 06 minutes longitude. The site is bounded on its western edge by the Passaic River (Figure 1). Adjacent to the northern and southern boundaries of the site are two licensed hazardous waste haulers. The site is bounded on the eastern side by Jacobus Avenue and is across the street from a lacquer manufacturing facility. The Syncon Resins site is situated on a narrow peninsula of land bordered by the Passaic and Hackensack Rivers, whose confluence 1.5 miles south of the site forms the upper reaches of Newark Bay. The site is relatively flat with minor topographic variations. The elevation at the site ranges from five to ten feet above mean sea level (MSL). Both the Passaic and Hackensack Rivers are tidal water bodies with a mean spring tidal range of approximately six feet. Newark Bay, the Passaic River, and the Hackensack River are major components of the Hudson River-New York Bight estuarine system. The narrow peninsula on which the Syncon Resins site is located is heavily industrialized. Various chemical plants, hazardous waste transporter, manufacturing companies, petroleum facilities, and storage terminals are situated within the immediate area. The closest residential areas to the site are located approximately one mile due west in Newark and one and one-half miles due southeast in Jersey City. The shallow aquifer in the area is not utilized for any purpose. Ground water from the confined or deeper aquifer within the area is utilized solely for industrial purposes. All potable water for the area's users is supplied via municipal water purveyors. The origin of the Syncon Resins site is obscure. The earliest evidence documenting the existence of the site consists of 1951 aerial photographs of the area. In November 1981, the New Jersey Department of Environmental Protection (NJDEP) investigated the site and ordered its owners to control and contain the hazards at the site. In May 1977, the owners of Syncon Resins filed for bankruptcy under Chapter 11 of the Bankruptcy Act; in 1982, the company ceased all operations. In December 1982, the site as listed on the National Priorities List. The Syncon Resins facility produced alkyl resin carriers for pigments, paints, and varnish products. The processes that produced these resins were carried out in closed stainless steel vessels. Cooling water utilized in the production process was recycled within the system. In the production process, excess xylene or toluene was separated from the wastewater and reused in subsequent reactions. The remaining wastewater was subsequently pumped to an unlined leaching pond (lagoon), where it was allowed to evaporate or percolate into the soil. Apparently, much of the company's operations consisted of the reprocessing of off-specification resins purchased from other manufacturers. The site consisted of at least two reactor buildings containing stainless steel vessels, various other buildings and structures, numerous large bulk storage tanks, two unlined lagoons, and an unknown number of underground tanks and associated piping systems. A total of 12,824 55-gallon drums of off-specification resins, raw materials, wastes and solvents stored at various locations on the site were removed in 1984, under a Cooperative Agreement between the NJDEP and the U.S. Environmental Protection Agency (EPA), at a cost of \$2.4 million. Still remaining on-site are numerous laboratory chemicals and batch samples of resins which are scheduled to be removed in the near future. As stated above, the two unlined lagoons at the site were used for discharging process wastewater. Lagoon 1 is the larger of the two lagoons, with approximate dimensions of 40 by 135 feet. Lagoon 2 is approximately 40 by 15 feet in size. The depth of each lagoon has been estimated at 4 feet. Six main buildings and seven ancillary structures exist on the Syncon Resins site. Building B-I appeared to be primarily utilized for maintenance and storage, with the western third of the building being utilized

SYNCON RESINS INC (Continued)

1000179652

for some production and/or process work. Building B-7 was the main production/process building and electrical service facility. Building B-10, near the front gate, contained administrative offices on the second floor and probably utilized the first floor as a storage area. Building B-II, near Lagoon 2, may have served as an equipment storage and/or maintenance area. Building B-RED, with loading docks adjacent to the railroad tracks and parking areas, most probably served as a shipping/receiving or short-term storage area. A laboratory (Building B-8) located near the main entrance and adjacent to Building B-10 was utilized for in-process formulations and quality checks of the finished product. The other buildings on-site were also used in process-related activities.

Current Site Status

Previous Investigations In 1982, a limited site investigation was performed by the NJDEP and the EPA at the Syncon Resins site. This investigation focused on a preliminary assessment of the types and extent of contaminants at the facility. The investigation showed widespread contamination. Within the deep aquifer, six contaminants (benzene, methylene chloride, tetrachloroethylene, chloroform, carbon tetrachloride and polychlorinated biphenyls [PCBs]) exceeded adjusted ambient water quality criteria (AAWQC). Shallow ground water was grossly contaminated with 24 organic compounds, of which fourteen exceeded AAWQC. Thirteen of these contaminants were found at extremely high concentrations (greater than 760 parts per million (ppm)), with nine of them present in the ground water at percent levels (parts per hundred). Seven contaminants found in the shallow ground water could not be compared to the water quality criteria since no criteria currently exist for these compounds. Gross chemical contamination was found within the Syncon Resins facility's soils. Ten base/neutral compounds in excess of 400 ppm and high concentrations of toluene and methylene chloride were found in test pit soils. PCBs (greater than 33,000 ppm), dichlorodiphenyltrichloroethane (DDT) (in excess of 1400 ppm) and high concentrations of arsenic, chromium, lead, mercury, and zinc were also present. Nearly all of the compounds found in the test pit soils are suspected carcinogens. Two localized areas of high concentrations of contaminants or "hot spots" were identified during this investigation: 1) The southwest corner of the site adjacent to Passaic River, and 2) the northeast corner of the property near the large 600,000-gallon storage tanks. High concentrations of toluene and PCBs were found in the southwest corner whereas elevated concentrations of naphthalene and petroleum hydrocarbons occurred in the northeast corner. A survey of the 12,824 55-gallon drums stored at various on-site locations revealed three main classes of materials: non-PCB containing, PCB containing, and peroxides. Most of the drummed material did not contain PCBs and could be separated into five categories: bulk solids (2,441 tons), flammable solids (1,452 drums), lab packs (10 drums), flammable liquids (79,100 gallons) and base/neutral liquids (66,911 gallons). PCB containing materials were categorized as bulk solids (1 ton), drummed liquids (29 drums) and flammable materials (49 drums). Only six drums of peroxide were found on-site. All of these drummed materials were removed from the site by licensed waste haulers.

Present Site Investigations

The sampling performed during the remedial investigation indicated extensive on-site contamination in all of the matrices sampled (i.e., vessels and tanks, soil, ground water, and building dirt/dust), except for ambient air. Four general classes of chemical contaminants were found on-site: organic compounds (volatiles and base/neutral extractables), pesticides, PCBs, and metals. The organic compounds present are normal raw materials and/or resin components, and the metals seen are probably from metallic oxides or organo-metallics utilized as pigments or catalysts in the production processes. A total of 150 tanks and vessels remain on-site including three which are underground. Approximately half of the on-site tanks are empty. Of those tanks containing material, most of the tanks contained either hexane or water-soluble peroxides or

SYNCON RESINS INC (Continued)

1000179652

hexane-soluble liquids and solids. Contamination from organic compounds exists throughout the Syncon Resins site. Volatile organic contaminant concentrations were greatest in the lagoon sediments, in saturated and unsaturated soils near the southwest corner of the site adjacent to Lagoon 2, and around Buildings 1 and 7. Primarily, the volatile contaminants were common solvents: toluene, xylene, trichloroethylene, ethylbenzene, benzene, 2-hexanone, methyl isobutyl ketone, and chlorobenzene. The data suggest that this contamination may have been caused, in part, by solvent carry-over into the wastewater and spills. The shallow aquifer was contaminated primarily with the same volatile organic solvents as those found in the lagoon sediments and former process buildings (i.e., toluene, xylene, and trichloroethylene). Generally, the greatest concentrations of these common solvents occurred in the south-central and south-western portions of the site near the tank farm and in the northeastern portion of the site near former drum storage areas. This suggests that tank and drum leakage or spillage may be the primary source of this contamination. The confined aquifer beneath the clay layer did not contain any volatile organic solvents found in other on-site matrices. Thus, the confining clay layer beneath the site appears to act as a barrier to vertical migration of chemical contaminants. Two solvents (1,1-dichloroethane and chlorobenzene) were present in the deep aquifer, but their absence from on-site water matrices suggest an off-site source. Acid/base/neutral organic compounds present in saturated and unsaturated soils on-site were principally phthalates, polyaromatic hydrocarbons, dichlorobenzene, N-nitrosodiphenylamine/diphenylamine and 4-methylphenol. Surficial phthalate contamination was found throughout the site, with the greatest concentrations occurring in the soils adjacent to the buildings at the southeast corner of the site near Jacobus Avenue. In contrast, none of the other acid/base/neutral compounds exhibited any vertical distributional pattern in the on-site soils. These compounds were instead concentrated in saturated and unsaturated soils in or near former storage, processing, or laboratory areas. This suggests that drums, tanks, or buildings may be possible point sources for these contaminants. Base/neutral organic compounds, principally naphthalene and 2-methyl naphthalene, were present in the ground water near the south-central tank farm and the large 600,000-gallon storage tanks at the northeastern corner of the site. These compounds were found only in the shallow aquifer, above the clay layer. The close proximity of the base/neutral compounds within the shallow aquifer to the large storage tanks and tank farm suggests that these vessels may be contamination sources. The two base/neutral compounds present in the shallow aquifer would have been used in the manufacture of some of the facility's products. Generally, the pesticides present at the Syncon Resins site were found in soils adjacent to former drum storage areas and in the building dust and dirt in former storage and shipping/receiving buildings. Pesticide contamination in the soil appeared to be a surficial phenomenon with the highest concentrations occurring in unsaturated soils. The distribution of pesticide contamination in soils simply suggests spillage, but bears no apparent connection with resin plant operations. PCB contamination at the Syncon Resins site is restricted to lagoon sediments, dirt and dust samples from former production/process buildings, and one soil area. It was also found in eight tanks and over 75 drums during the 1984 removal action. Again, there is no apparent connection between this contaminant (PCBs) and alkyd resin manufacturing. While metal contamination was present in all non-air sample matrices, elevated individual metal concentrations exhibited distinct on-site distributional patterns within certain matrices. In soils, the highest metal concentrations were generally present within the western one-third of the site near the Passaic River and adjacent to former drum/tank storage areas. Spillage onto the soil in the drum/tank storage areas is the most probable cause of this contamination. In contrast, inorganic contamination of the shallow aquifer

MAP FINDINGS

SYNCON RESINS INC (Continued)

1000179652

showed no specific distributional pattern except for arsenic, which also tended to be highest in surficial soils in the northern half of the site. In general, inorganic constituents within the deep aquifer were metals not found within the shallow aquifer. Excluding barium and zinc, no other metals within the deep aquifer were detected in the shallow ground water above the clay layer, suggesting that the clay layer serves as an effective barrier to vertical migration. The lagoon sediments and the building dirt/dust contain similar relative proportions of certain metal concentrations that would have been utilized at the Syncon Resins site during its operation. Thus, the bulk of the metal contamination at the Syncon Resins site may stem from improperly handled raw materials or byproducts, especially with regard to catalysts and pigments. The Syncon Resins site exhibits extensive chemical contamination of organic compounds, pesticides, PCBs and metals. Although some specific contaminants were concentrated in particular on-site areas, all of the apparent site-related contaminants were restricted to matrices located above the clay layer beneath the site. Chemical constituents were present in the confined aquifer beneath the clay layer. These constituents, however, appears to stem from an off-site source. The chemical contamination present at the Syncon Resins site is apparently restricted from vertical movement due to the clay layer beneath the site. However, lateral movements of contaminants within the shallow aquifer are not restricted. The ground water flow within the shallow aquifer can transport these contaminants to the Passaic River. This ground water movement, in conjunction with tidal flushing, is one of the principal means of off-site transport of contaminants. A Record of Decision addressing OU01 of the Syncon Resins Site was completed in September, 1986. Operable Unit 02 RI activities performed under OU2 included soil and groundwater sampling, a Cone Penetrometer Testing (CPT) investigation, and a Pilot Scale Field Test to study the movement of contamination in the groundwater. In February and March 1997, a CPT was used to probe the shallow subsurface at approximately 70 locations. The results of this testing revealed that widespread free and/or residual product were still present throughout the Site. The depth of free and residual product at many of the probe locations was found to be about 6 to 8 feet below existing grade. Based on the CPT investigation, approximately 30,000 CY of soil were contaminated with free and/or residual product. In summer 1997, a pilot-scale field test was initiated near the existing collection trench on the Site. The purpose of the testing was to confirm through excavation that areas of high fuel fluorescence detector readings actually represent free/residual product and to determine if flushing could be enhanced by installing a connector trench from the product-contaminated area to the existing collection trench. Four rounds of samples were collected. The analytical data did not indicate any rapid movement of contamination from the surrounding areas through groundwater in the excavated trench. Influent contamination levels at the CWTS also showed no significant change. In January 1998, NJDEP completed an FS of the Site using the data collected during the investigations noted above. The results of the study are summarized in the July 1998 focused feasibility study (FFS) Report for the Site. OU2 efforts were directed at improving the efficiency and effectiveness of the existing OU1 remedy by removing the remaining free/residual product source of contamination, and enhancing the natural flushing component of the existing remediation system. These enhancements were expected to shorten the remediation phase. An OU2 ROD was issued on September 27, 2000. The major components of the OU2 remedy were: excavation and drainage of approximately 30,000 CY of contaminated soil from an area of about 2.5 acres; removal and disposal of buried debris and other obstructions from the excavated areas; installation of a drainage layer at the bottom of the excavations, treatment and or disposal of drained free product from the excavated materials; addition of soil amendments to the excavated soil before

backfilling; possible restoration of natural hydraulic conditions; discontinuation of the CWTS operation, and establishment of institutional controls to ensure continued commercial/industrial use of the property. On July 10, 2001, the first Five-Year Review was completed. The report recommended continuing operation of the existing groundwater collection and treatment system, until monitoring of the groundwater indicates that contaminant levels are below the applicable criteria. In December 2002, NJDEP received funding from EPA to start OU2 activities and in January 2004, NJDEP started contractual proceedings to perform a Preliminary Design Investigation (PDI). A PDI was conducted from July to October 2006 by NJDEP. The PDI consisted of geophysical investigations and soil and groundwater sampling, and was intended to further delineate the source(s) and extent of contamination in soil and groundwater to facilitate an effective and efficient evaluation of the remedy selected in the 2000 OU2 ROD. The results of the investigation and the comparison with the 2000 ROD were presented in a Draft PDI Report dated February 14, 2007. The report indicated that it would not be feasible to implement the remedy selected in 2000 because total petroleum hydrocarbons (TPHs), which also contains PCBs, would not drain from the soil. In May 2006, a building assessment was performed by NJDEP. The structural integrity of 12 buildings was found to be compromised, which would make it unsafe to perform any vibratory or excavation activities within or adjacent to them, and building demolition was recommended. In addition, asbestos-containing material (ACM) and lead-based paint were suspected to be present in the buildings, but the assessment was limited due to the compromised structural integrity of the buildings. A more detailed survey, with appropriate protective measures, was recommended to further investigate the distribution of ACM prior to building demolition activities. A second Five-Year Review Report for the Site was issued on September 7, 2006. This review recommended the following: the OU2 remedy needs to be designed and constructed; NJDEP needed to continue the operation, maintenance and monitoring of the OU1 remedy; NJDEP needs to conduct more frequent sampling of groundwater monitoring wells located near the slurry wall to confirm that the wall is functioning as intended and there are no contaminants migrating off-site; access controls needed to be maintained and the Site use must remain restricted so that the public is not exposed to site-related contaminants; and the ongoing operation and maintenance and monitoring are subject to routine modification and adjustment. In 2007, EPA assumed the lead responsibility for Site activities for OU2. On July 14, 2008, a field investigation was conducted which consisted of collecting soil borings and conducting sampling activities. In 2009, a technical memorandum was prepared to assess regional groundwater flow and water quality in unconsolidated deposits in the vicinity of the Site. In 2010, EPA started FFS activities and the final report is dated August 10, 2010. A Record of Decision (ROD) Amendment for Operable Unit 2 of the Syncon Resins Site was completed in September 2010.

Site Description: Syncon Resins manufactured paint, varnish and resins at this site until 1982.

It is located in a coastal management area and borders the Passaic River. The facility consisted of 13 buildings, numerous large storage vessels and tanks and two unlined wastewater lagoons. At the time operations ceased, approximately 13,000 55-gallon drums of various chemicals were being stored at the site, most of which were in poor condition and leaking. USEPA added the Syncon Resins facility to the National Priorities List of Superfund sites (NPL) in 1983. The following year NJDEP implemented an Interim Remedial Measure (IRM) to remove and dispose of all of the drums. Between 1984 and 1986, NJDEP conducted a Remedial Investigation and Feasibility Study (RI/FS) that revealed extensive contamination in the soil, ground water and building, and large volumes of liquid and solid chemical wastes in the various storage vessels and tanks at the site. USEPA issued a Record of Decision (ROD) with NJDEP concurrence in 1986 that required the following remedial actions: 1) removal of the lagoon liquids and sediments and the contents of the storage vessels and tanks; 2) excavation and disposal of the grossly contaminated soil and decontamination of the buildings and other site structures; 3) installation of an on-site remediation system to extract and treat the contaminated ground water; and 4) treatment of residual soil contamination by soil flushing. In 1989, NJDEP conducted a second IRM to remove thousands of small containers of chemicals from the on-site laboratory and initiated the remedial actions specified in the ROD. By 1992, NJDEP had removed the lagoon liquids and other wastes from the site, decontaminated the buildings and tanks, excavated and removed the grossly contaminated soil and completed construction of a soil flushing/ground water treatment system. These actions were subsequently designated Operable Unit 1 (OU1). While operation of the soil flushing/ground water treatment system was underway, NJDEP conducted supplemental studies that revealed highly contaminated soil and ground water at the southwestern portion of the plant were not being adequately addressed by the existing system. In 2000, USEPA issued a ROD for the southwestern portion of the site, which was designated OU2. The ROD requires excavation of approximately 30,000 cubic yards of heavily contaminated soil from a 2.5 acre area, followed by treatment and disposal of drained free product from the soil, improvement of the subsurface drainage at the southwestern portion of the site, and backfilling the excavation with the drained soil after nutrients have been added to enhance biodegradation of the residual organic contaminants. These actions are expected to significantly improve the effectiveness of the soil flushing/ground water treatment system and expedite cleanup of the site. The ROD also requires establishment of a Deed Notice or other institutional controls to ensure that the property is used for industrial or commercial purposes only. NJDEP began the Remedial Design for the OU2 remedial action in late 2003.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 16966.2

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 113893

Corrective Action Summary:

Event date: 11/10/1990
Event: RFA Completed

Event date: 09/26/1994
Event: Corrective Action Process Terminated

Event date: 06/29/1995
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

SPCC

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate

that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Corrective Action Summary:

- Event date: 10/15/1988
- Event: RFA Completed

- Event date: 07/01/1992
- Event: RFI Imposition

- Event date: 03/04/1993
- Event: CA Prioritization, Facility or area was assigned a low corrective
action priority.

- Event date: 04/05/1993
- Event: RFA Determination Of Need For An RFI, RFI is Necessary;

- Event date: 04/05/1993
- Event: RFI Workplan Approved

- Event date: 06/07/1995
- Event: RFI Workplan Approved

- Event date: 06/30/1995
- Event: RFI Workplan Approved

- Event date: 10/18/1995

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with

Map ID

CHEMICAL WASTE MANAGEMENT OF NJ (Continued)

1000106493

a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Site Description: 9 Fredon St. address was used by USA Today was used because of a RCRA generator form filled out by Phil Clappin, RCB, dated 5/2/02 during a RCRA inspection follow-up for smelter initiative. Barth Smelting Corp operated at the site from 1946 to 1982; a 1988 fire insurance map did not show Barth smelting on site, and the two factory buildings were removed. On April 26, 2012, NJDEP personnel observed the site as being paved and fenced. Based on past operational history and current observations made during NJDEP's facility inspection; Barth Smelting Corp.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions,

and settlements.

TSCA SUBMITTER

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

AIR MINOR

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Corrective Action Summary:

Event date: 06/09/1993
Event: RFA Completed

Event date: 06/09/1993
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 03/15/1995
Event: Stabilization Measures Evaluation, This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 03/15/1995
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 08/21/2000
Event: CMI Workplan Approved

Event date: 10/18/2000
Event: RFI Workplan Approved

Site Description: This site has a history of landfilling activities dating back to 1951. The most recent operator, V. Ottilio & Sons, conducted landfilling under a state permit between 1975 and 1979. Materials disposed of in the landfill consisted mainly of construction debris; however, illegal dumping is suspected to have occurred prior to and throughout the Ottilio operation. Oil has been observed in drainage ditches and ponds at the site and an unknown number of chemical drums were disposed of at the property. NJDEP's Remedial Response Element conducted a Remedial Investigation/Remedial Action Selection (RI/RAS) that revealed the ground water, surface water, subsurface soil and sediments at the site were contaminated with organic and inorganic compounds. Based on these findings, NJDEP issued a Decision Document in 1996 that required installation of a landfill cap, a landfill gas collection/venting system and leachate collection system, as well as excavation of contaminated drainage ditch sediments and long-term monitoring of the ground water. NJDEP completed the Remedial Design for the landfill cap, landfill gas collection/venting system and leachate collection system in 2002 and construction of the remedial measures is underway. Construction activities are expected to be completed in 2004.

MIXTURES.

- . Waste code: F004
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F005
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F006
- . Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

- . Waste code: F007
- . Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

- . Waste code: F008
- . Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Tank/Pipe Construction Type: Pipe Fiberglass-reinforced plastic

Tank Id: TANK-9
Tank Number: 8
Tank Status: Removed
Tank Status Date: 10/17/1997
Install Date: 01/01/1944
Tank Contents: Leaded Gasoline
Tank Size: 2000
Tank Compliance: No
Overfill: No
Compliance Monitoring?: No
Overfill Protection: No
Spill Containment: No
Tank Wellhead Protection: Not reported
Tank/Pipe Construction Type: Tank Bare steel
Tank/Pipe Construction Type: Pipe Fiberglass-reinforced plastic

Scoring: 4

Summary Details:

The Standard Chlorine Chemical Company, Inc. (Standard Chlorine), site is located in an industrial area along the tidally-influenced Hackensack River in Kearny Township, New Jersey. Chemical manufacturing and/or processing occurred at the 25-acre facility from the early 1900s to the 1990s. Operations included the production and refinement of naphthalene, the storage and packaging of 1,4-dichlorobenzene moth preventatives and deodorizers, the production of dye carriers, and the processing of liquid petroleum naphthalene for the manufacture

of moth balls and flakes, as well as several other manufacturing activities. In December 2001, New Jersey Department of Environmental Protection NJDEP) requested that EPA evaluate the Standard Chlorine site for listing on the National Priorities List due to the complex environmental issues present at the site and the inability of the responsible parties to address the issues. The NJDEP indicated that Standard Chlorine had not completed Remedial Investigation activities and was non-compliant with the terms of an 1989 Administrative Consent Order (ACO). The NJDEP has terminated their ACO with Standard Chlorine. Several potential source areas exist at the Standard Chlorine site. The primary areas of concern include contaminated soils throughout the site and two lagoons located on the eastern portion of the facility property. Another concern is an area of PCB-contaminated soils and concrete in the vicinity of a former transformer located adjacent to Building 2 on the western portion of the property. All of these areas appear to ultimately drain into the Hackensack River via three probable points of entry: a drainage pipe along the northern property boundary, a drainage ditch that runs along the southern property boundary, and overland runoff that flows directly from the facility property to the river. Free phase product in the soils and groundwater also appears to discharge directly to surface water bodies. Tanks and drums containing or at one time contained) various site-related hazardous substances, including dioxin contaminated asbestos, also are present at the facility. In addition, contaminated fill material from non-site related chromium ore processing activities is present on the site property, as well as on other properties in the Hackensack Meadowlands. The predominant hazardous substances associated with the lagoons and surrounding contaminated soils include: benene, dichlorobenenes, chlorobenene, trichlorobenenes, naphthalene, and dioxin TCDD). In addition, PCB-1260 was detected at 9300 milligrams per kilogram (mg/kg) in concrete chips taken from the vicinity of the former transformer, and at lesser concentrations 0.12 to 0.29 mg/kg) in soil samples collected directly beneath the concrete pavement. Data from sampling events conducted between 1992 and 2002 indicate that a release of site-related hazardous substances has occurred to the Hackensack River and adjacent wetlands. Dioxins, Dichlorobenenes, 1,2,4-trichlorobenene, naphthalene, benene, and chlorobenene, as well as several other semivolatile and volatile organic compounds, have been detected at varying levels in these samples. During the 2002 EPA sampling event, dioxin 2,3,7,8-TCDD) was detected at 96.1 nanograms per kilogram (ng/kg) in a sediment sample taken in the Hackensack River. Surface water samples taken from the outfall at the point of discharge to the Hackensack show concentrations of naphthalene at 45 micrograms per kilogram (µg/kg) and 1,2,4-trichlorobenene at 12 µg/kg. A seep was also observed entering the Hackensack River from the sediment southeast of the outfall where the southern drainage ditch confluences with the Hackensack River. The seep was black in color with observed sediment. Chemical analysis of the seep indicates the presence of 1,4-dichlorobenene at 2 µg/kg. Warnings pertaining to the consumption of some fish (particularly crab) and a health advisory have been issued for the Hackensack River due to PCB and dioxin contamination, originating in part from the Standard Chlorine site. Reportedly, however, fishing still occurs along the river. The site lies in the Hackensack Meadowlands which has been identified by the US Fish and Wildlife Service as a Significant Habitat Complex of the New York Bight Watershed at the request of the US EPA's New York - New Jersey Harbor Estuary Program, and may be a habitat for some state or Federal designated endangered and/or threatened species. Releases of site-related hazardous substances to ground water also have been documented since at least the early 1980s. The description of the site release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Land type: Private
Classification: TSDF
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: CHEMICAL LEAMAN TANK LINES INC
Owner/operator address: PO BOX 200
OPERCITY, PA 99999
Owner/operator country: US
Owner/operator telephone: (215) 363-4200
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Owner/operator name: QUALITY DISTRIBUTION INC
Owner/operator address: 3802 CORPOREX DR
TAMPA, FL 33619
Owner/operator country: US
Owner/operator telephone: (813) 754-4725
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Universal Waste Summary:

Waste type: Batteries
Accumulated waste on-site: Yes
Generated waste on-site: Not reported
Waste type: Lamps
Accumulated waste on-site: Yes
Generated waste on-site: Not reported
Waste type: Pesticides
Accumulated waste on-site: Yes

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/16/2014	Source: EPA

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/16/2014	Source: EPA
Date Data Arrived at EDR: 01/08/2015	Telephone: N/A
Date Made Active in Reports: 02/09/2015	Last EDR Contact: 04/08/2015
Number of Days to Update: 32	Next Scheduled EDR Contact: 07/20/2015
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/16/2014	Source: EPA
Date Data Arrived at EDR: 01/08/2015	Telephone: N/A
Date Made Active in Reports: 02/09/2015	Last EDR Contact: 04/08/2015
Number of Days to Update: 32	Next Scheduled EDR Contact: 07/20/2015
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

Number of Days to Update: 94	Next Scheduled EDR Contact: 09/07/2015
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/08/2015	Telephone: 703-603-8704

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

SHWS: Known Contaminated Sites in New Jersey

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

HWS RE-EVAL: Site Re-Evaluation Report

The locations were removed from the Known Contaminated Sites list for a variety of reasons. Some of the sites were taken off the list because they were inactive, some were not assigned a case worker and some were no longer contaminated. Inspectors from the DEP are now undertaking a full re-evaluation of each of the locations statewide. That includes visual and environmental tests to see whether contamination still exists.

Date of Government Version: 09/20/2007

HIST HWS: Known Contaminated Sites Listing

The Known Contaminated Sites in New Jersey report is a municipal listing of sites where contamination of soil and/or ground water is confirmed at levels greater than the applicable cleanup criteria or standards. Remedial activities are underway or required at the sites with an on-site source(s) of contamination and at locations where the source(s) of contamination is unknown. Sites with completed remedial work that require engineering and/or institutional controls have reporting measures in place to ensure the effectiveness of past actions, and some include maintenance and/or monitoring

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015	Source: Drug Enforcement Administration

LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharge occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

Other Ascertainable Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 01/18/2015	Source: EPA
Date Data Arrived at EDR: 02/27/2015	Telephone: (212) 637-3000
Date Made Active in Reports: 03/25/2015	Last EDR Contact: 06/10/2015
Number of Days to Update: 26	Next Scheduled EDR Contact: 09/21/2015
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

ISRA: ISRA Database

The ISRA process begins with determining if the Act applies to your type of business and transaction. The provisions of ISRA only apply to industrial establishments. What is an industrial establishment? The term "industrial establishment" refers to the type of business operations and transactions that would subject a facility to review under ISRA.

An industrial establishment must meet each of the following three criteria: The place of business or real property at which such business is conducted, having a North American Industry Classification System (NAICS) code listed in N.J.A.C. 7:26 B - Appendix C subject to the specified exceptions and limitations. The place of business must have been engaged in operations on or after December 31, 1983; and The place of business must involve the generation, manufacture, refining, transportation, treatment, storage, handling, or disposal of hazardous substances or hazardous wastes.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GW CONTAM AREAS: Groundwater Contamination Areas

This data identifies those sites where groundwater contamination has been identified and, where appropriate, the NJDEP has established a Classification Exception Area (CEA). CEAs are institutional controls in geographically defined areas within which the New Jersey Ground Water Quality Standards (NJGWQS) for specific contaminants have been exceeded. When a CEA is designated for an area, the constituent standards and designated aquifer uses are suspended for the term of the CEA. This data layer contains information about areas in the state which are specified as the Currently Known Extent (CKE) of ground water pollution. CKE areas are geographically defined areas within which the local ground water resources are known to be compromised because the water quality exceeds drinking water and ground water quality standards for specific contaminants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> HUDSON, NJ	<u>FEMA Flood Electronic Data</u> YES - refer to the Overview Map and Detail Map

Additional Panels in search area:	34013C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> JERSEY CITY	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile NNW
Site Name:	G and S Motors Equipment Inc.
Site EPA ID Number:	NJD011370525
Groundwater Flow Direction:	E TOWARD THE HACKENSACK RIVER ALTHOUGH THE FLOW MAY BE TIDALLY INFLUENCED NEAR THE SURFACE.
Inferred Depth to Water:	at or near the ground surface.
Hydraulic Connection:	Information is not available about the hydraulic connection between the near surface marsh, clay, and sand deposits and the underlying Brunswick Formation bedrock (lower aquifer).
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Triassic
Series: Triassic
Code: Tr *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: SULFAQUENTS

Soil Surface Texture: mucky-peat

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly. Soils are wet to the surface most of the time. Depth to water table is less than 1 foot, or is ponded.

Hydric Status: Soil meets the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: HIGH

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	14 inches	mucky-peat	A-8	Highly organic soils, Peat.	Max: 20.00 Min: 0.60	Max: 7.30 Min: 4.50
2	14 inches	72 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 7.30 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: gravelly - sandy loam
extremely gravelly - sand
sand
sandy loam

Surficial Soil Types: gravelly - sandy loam
extremely gravelly - sand
sand
sandy loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: gravelly - sandy loam
extremely gravelly - sand
coarse sand
stratified
fine sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
