

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 1 City/County: Arlington Sampling Date: November 24, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 01-WTL-01-wet  
 Investigator(s): M. Rockwell & R. Mangum Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): \_\_\_\_\_ Local relief (concave, convex, none): \_\_\_\_\_ Slope (%): \_\_\_\_\_  
 Subregion (LRR or MLRA): LRR: S, MLRA: 149A Lat: 38.86641 Long: -77.044998 Datum: NAD-1983  
 Soil Map Unit Name: Urban land-Udorthents complex, 2 to 15 percent slopes NWI classification: PSS

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No \_\_\_\_\_ (If no, explain in Remarks.)  
 Are vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? No Are "normal circumstances" present? Yes X No \_\_\_\_\_  
 Are vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No _____	Is the Sampled Area within a Wetland? Yes <u>X</u> No _____
Hydric Soil Present? Yes <u>X</u> No _____	
Wetland Hydrology Present? Yes <u>X</u> No _____	
Remarks: <b>This is a tidally influenced fringe wetland located east of Roaches Run Waterfowl Sanctuary and west of the railway. Due to access restrictions, a wetland datapoint was not able to be taken.</b>	

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)		
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> Aquatic Fauna (B13)	<input type="checkbox"/> Surface Soil Cracks (B6)
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Marl Deposits (B15) ( <b>LRR U</b> )	<input type="checkbox"/> Sparsely Vegetated Concave Surface (B8)
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Drainage Patterns (B10)
<input type="checkbox"/> Water Marks (B1)	<input type="checkbox"/> Oxidized Rhizospheres on Living Roots (C3)	<input type="checkbox"/> Moss Trim Lines (B16)

<b>Restrictive Layer (if observed):</b>								
Type: _____								
Depth (inches): _____			Hydric soil present?			Yes	<input checked="" type="checkbox"/>	No <input type="checkbox"/>
Remarks: Due to access restrictions, a soil core was not obtained. The soils fall within the following map unit: Urban land-Udorthents complex, 2 to 15 percent slopes. Udorthents are loamy clayey soils common along highways and side slopes.								

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 01-WTL-01-wet

Project/Site: DC2RVA-Area 1

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	3	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	3	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	4	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	4	

Total Score     19

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

01-WTL-01-wet

Wetland fringe vegetation.

01-WTL-01-wet

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-01-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

Hydric soil present? Yes ☒ No ☐

Remarks: **Soil profile indicates reducing conditions and likely disturbance from railroad, gas ROW, and parking lot to the north.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-02-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

**Hydrophytic Vegetation Indicators:**

☐ 1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0

☐ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).

## SOIL

Sampling Point: **02-WTL-03-wet**

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)									
Depth (inches)	Matrix		Redox Features				Texture	Remarks	
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>

<input type="checkbox"/> Sandy Gleyed Matrix (S4)	<input type="checkbox"/> Reduced Vertic (F18) (MLRA 150A, 150B)		
<input type="checkbox"/> Sandy Redox (S5)	<input type="checkbox"/> Piedmont Floodplain Soils (F19) (MLRA 149A)		
<input type="checkbox"/> Stripped Matrix (S6)	<input type="checkbox"/> Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)		
<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)			

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):		Hydric soil present?	
Type:		Yes	<input checked="" type="checkbox"/>
Depth (inches):		No	<input type="checkbox"/>

Remarks: **Although the soil value and chroma are indicative of redox dark surface, there is an apparent lack of redoximorphic features. It is likely that the dark organic matter within the soil is masking some of the concentrations that may be present.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-03-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-04-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

Prevalence Index = B/A = **2.18**

**Hydrophytic Vegetation Indicators:**

☐ 1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0

☐ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).

**Railroad ditch wetland frequently treated with herbicides. Few woody plants.**

<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)			

**Restrictive Layer (if observed):**  
 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes \_\_\_\_\_ No ☒

Remarks: Soils not depleted enough to check the depleted matrix box. However, soils are actively reducing. Area was degraded with somewhat recent railroad construction which adversely affected the soil profiles. Professional judgement used.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-05-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-06-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.		

Total Score 3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None

Remarks: **Small gravelly pebble associated with 10-15 inch depth. Soils showing signs of long term saturation.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-07-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-09-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-10-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes ☒ No ☐

Remarks: **Soil gets more sandy with increasing depth. Professional judgment used to determine hydric soil status.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-11-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-12-wet-2

Project/Site: DC2RVA-Segment 03

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if observed):**  
 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes ☒ No ☐

Remarks: **Although the soil value and chroma are indicative of a depleted matrix, there is an apparent lack of redoximorphic features. It is likely that the dark organic matter within the soil is masking some of the concentrations that may be present.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-13-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	2	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3

Depth (inches): <u>7</u>		<u>X</u>	

Remarks: **Restrictive layer at 7 inches. Soils show strong hydric indicators.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-14-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3	

Total Score     13

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-15-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

Restrictive Layer (if observed):		Hydric soil present?	
Type:		Yes	<input checked="" type="checkbox"/>
Depth (inches):		No	<input type="checkbox"/>

Remarks: **Soils near surface appear to have been disturbed; may contain fill. Very gravelly in most areas within study limits. Professional judgment used to determine hydric soil status.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-16-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

Remarks: **Soil is dry but shows signs of reduced conditions below 5 inches.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-17-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      7

Score	Potential to Provide Desirable Wetland Functions and Values

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-19-wet-2

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	3	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	3	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-20-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score 3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

<b>Restrictive Layer (if observed):</b>								
Type: _____								
Depth (inches): _____			Hydric soil present?			Yes _____	No <u>X</u> _____	
Remarks: A soil core was not obtained. This upland point is adjacent to the railway. Soils typically contain gravel/rock from the railway ballast and may be restrictive at a shallow depth. The soils fall within the following map unit: Urban land. This map unit consists of nearly level to moderatetly steep areas where the soils have been altered or obscured by urban work and structures.								

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Fairfax County Sampling Date: October 22, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-21-wet  
 Investigator(s): D. Mitchell, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): Concave Slope (%): 5%  
 Subregion (LRR or MLRA): LRR: S, MLRA: 149A Lat: 38.706449 Long: -77.220169 Datum: NAD-1983  
 Soil Map Unit Name: Elkton Silt Loam NWI classification: PFO

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>Wetland is low area along east side of railroad. Wetland receives drainage from 03-B-STR-01 located south of wetland. There is capillary action on hillslope of railroad. STR-01 turns into WTL-01. There are several braided channels within the wetland. Soil is sandy and saturated. Many black willow trees are present.</b> Field Sheet: 03-B-WTL-01-WETDP1

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-21-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 6

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-22-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      2

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-22-wet      Inundated portion of wetland.

02-WTL-22-wet      Herbicide use in RR ditch wetland.

<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)		

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

<b>Restrictive Layer (if observed):</b>			
Type: _____			
Depth (inches): _____	Hydric soil present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>

Remarks: **Soils are disturbed as a result of being near railroad, but they are actively reducing.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-23-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      2

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-23-wet      Narrow RR ditch wetland.

02-WTL-23-wet      Inundation in RR ditch wetland.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Fairfax County Sampling Date: October 21, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-23-upl  
 Investigator(s): D. Mitchell, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): None Slope (%): 15%  
 Subregion (LRR or MLRA): LRR: S, MLRA: 149A Lat: 38.68738 Long: -77.226677 Datum: NAD-1983  
 Soil Map Unit Name: Grist Mill sandy loam NWI classification: upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>X</u>	
Remarks: <b>Upland point adjacent to WTL-11. Located on hillslope on east side of WTL-11. Soil is well drained.</b> <b>Field Sheet 04-B-WTL-11-UpDP1</b>

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-24-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      3

Score	Potential to Provide Desirable Wetland Functions and Values

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-25-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score      7

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-25-wet

Wetland vegetation.

02-WTL-25-wet

Sparsely vegetated surface with  
surface soil cracks.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Colchester/Fairfax Sampling Date: July 21, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-25-upl  
 Investigator(s): L. Postaski & R. Mangum Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): CSX ballast toe Local relief (concave, convex, none): Convex Slope (%): 2%  
 Subregion (LRR or MLRA): LRR: S, MLRA: 149A Lat: 38.674307 Long: -77.230632 Datum: NAD-1983  
 Soil Map Unit Name: Grist Mill sandy loam, 0 to 25 percent slopes NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present? Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>	
Remarks: <b>The upland point is located on the ballast of the railroad. No vegetation present. Access to soils restricted by compacted gravel layer.</b>

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-26-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-26-wet-1 Area with no herbaceous layer.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-27-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-27-wet      Herbaceous habitat.

02-WTL-27-wet      Wetland habitat near CSX ballast.

<input type="checkbox"/> Stripped Matrix (S6)	<input type="checkbox"/> Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)		
<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)			

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):		Hydric soil present?	
Type:		Yes	<input checked="" type="checkbox"/>
Depth (inches):		No	<input type="checkbox"/>

Remarks: Many soil samples near the railroad have the black layer of coarse sand that has a unique (maybe petroleum) odor. This soil is found along the fill portion of the railroad and likely is due to railroad activity.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-28-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-28-wet      Typical PEM habitat.

02-WTL-28-wet      PFO habitat in background (out of study area).

02-WTL-28-wet      Culvert entering wetland.

02-WTL-28-wet      Wetland parallels CSX.

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

<b>Restrictive Layer (if observed):</b>			
Type: _____			
Depth (inches): _____	Hydric soil present?	Yes _____	No <u>  X  </u>

Remarks: Upland area has black, coarse sandy coal-like material likely from railroad activity or fill.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Prince William County Sampling Date: October 20, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-29-wet  
 Investigator(s): D. Mitchell, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): depression Local relief (concave, convex, none): concave Slope (%): 2%  
 Subregion (LRR or MLRA): LRR: S, MLRA: 149A Lat: 38.671479 Long: -77.23406 Datum: NAD-1983  
 Soil Map Unit Name: Grist Mill sandy loam NWI classification: PEM

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u> Hydric Soil Present? Yes <u>X</u> No <u>    </u> Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Remarks: Area appears to have many seep areas. See nearby streams 8 & 9. This area is not directly connected to these streams, but likely has an underground hydrological connection. Area may be close enough to perennial stream outside study area to be considered jurisdictional. At the surface this PEM wetland appears isolated. Field Sheet 04-B-WTL-07-wetDP1.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-29-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric soil present? Yes ☒ No ☐

Remarks: A soil core was not obtained. The soils fall within the following map unit: Elkton silt loam, 0 to 2 percent slopes, occasionally ponded. Elkton soils are poorly drained.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-30-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score 3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-31-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score     10

Score	Potential to Provide Desirable Wetland Functions and Values
0	None

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-32-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-33-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-34-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

**Restrictive Layer (if observed):**  
 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes ☒ No ☐

Remarks: **Soils are 6/1 in lower areas that show stronger signs of inundation.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-35-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Score	Potential to Provide Desirable Wetland Functions and Values

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-36-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-37-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-37-wet      Herbaceous wetland.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-38-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):		Hydric soil present?	
Type: _____		Yes	No
Depth (inches): _____		<input checked="" type="checkbox"/>	<input type="checkbox"/>

Remarks: **Area appears to remain saturated for long durations during the growing season, and the soils indicate this.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-38-wet-2

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score 10

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-38-wet-2      Herbaceous vegetation in wetland.

02-WTL-38-wet-2      Wetland soil core

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Prince William County Sampling Date: October 19, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-38-upl-2  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): terrace Local relief (concave, convex, none): None Slope (%): 5%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.640123 Long: -77.250978 Datum: NAD-1983  
 Soil Map Unit Name: Featherstone mucky silt loam NWI classification: upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>	
Remarks: <b>This is the upland data point above the jurisdictional limits of the wetland 04-WLT-02-wet-S. Although the soils and vegetation indicate it could be part of the wetland, the lack of hydrology indicates that it is just outside the limits.</b>

**Dominance Test worksheet:**

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across all Strata: 3 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 33.33% (A/B)

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>35</u>	x 2 = <u>70</u>
FAC species <u>5</u>	x 3 = <u>15</u>
FACU species <u>30</u>	x 4 = <u>120</u>
UPL species <u>30</u>	x 5 = <u>150</u>
Column totals <u>100</u> (A)	<u>355</u> (B)

 Prevalence Index = B/A = 3.55
**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

2 - Dominance Test is >50%

3 - Prevalence Index is ≤3.0

   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?**

Yes X No   

Remarks: (If observed, list morphological adaptations below).

**Woody vine stratum is very dense. Some walnut trees present, silver maple present just outside upland data plot.**

**Hydrophytic Vegetation Indicators:**  
1 -Rapid Test for Hydrophytic Vegetation  
☒ 2 - Dominance Test is >50%  
☒ 3 - Prevalence Index is ≤3.0  
       Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**  
**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.  
**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).

**Alluvial hardwood swamp/bottomland hardwoods. Other important species not in plot include: *Sarurus cernuus*, *Cryptotaenia*, *Mimulus alathis*, and *Carex squarosa*.**

**Dominance Test worksheet:**

Number of Dominant Species That Are OBL, FACW, or FAC: 5 (A)

Total Number of Dominant Species Across all Strata: 6 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 83.33% (A/B)

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>29</u>	x 2 = <u>58</u>
FAC species <u>138</u>	x 3 = <u>414</u>
FACU species <u>13</u>	x 4 = <u>52</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>180</u> (A)	<u>524</u> (B)

Prevalence Index = B/A = 2.91

**Hydrophytic Vegetation Indicators:**

   1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0

   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).

**Mesic hardwood upland forest on old railroad grade.**

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Prince William County Sampling Date: October 20, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-41-wet  
 Investigator(s): L. Eggering, W. Moorhead Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 2%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.626426 Long: -77.251258 Datum: NAD-1983  
 Soil Map Unit Name: Marumsco loam NWI classification: PFO

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>This is a BH slough and herbaceous wetland that lies between CSX railroad toe of slope and an old railroad bed. The data point is in the BH slough and the upland point is in the old railroad bed/trail area. CSX portion of the wetland is maintained. PEM habitat. On USFWS property for the wooded portion. Field Sheet: 04WTL04USFWS wetland.</b>

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-41-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	Limited by the small size and juxtaposition of the CSX line.
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-42-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

4	High
5	Very High

02-WTL-42-wet-1      Typical habitat for drier portions of the wetland.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Prince William Sampling Date: October 20, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-42-upl-1  
 Investigator(s): L. Eggering, W. Moorhead Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): terrace Local relief (concave, convex, none): none Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.622455 Long: -77.25169 Datum: NAD-1983  
 Soil Map Unit Name: Marumsco loam NWI classification: upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>X</u>	
Remarks: <b>Upland point is near the CSX ballast and is 2 feet higher in elevation than the existing floodplain.</b>		

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)		
<u>    </u> Surface Water (A1)	<u>    </u> Aquatic Fauna (B13)	<u>    </u> Surface Soil Cracks (B6)

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-42-wet-2

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-42-wet-3

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	3	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 10

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-42-wet-3      Inundation in wetland.

02-WTL-42-wet-3      CSX bridge in background.

02-WTL-42-wet-3      Upland data point/raised road bed.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-43-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)		

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if observed):**  
 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes ☒ No ☐

Remarks: **The clay in the soil core likely creates an impenetrable layer which aids in the wetland hydrology.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-44-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-44-wet      Rippon Station platform in the background.

02-WTL-44-wet      PEM portion of the wetland.

Remarks: **The railroad ditch wetland has reducing soil conditions. Lots of railroad debris and litter in ditch, not very high quality.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-45-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-45-wet      Low quality RR ditch wetland.

02-WTL-45-wet      Typical vegetation in wetland.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-46-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	4	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	4	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	2	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	4	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	3	Limited by tidal shifts.
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3	

Total Score     20

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-46-wet-1 PSS portion of the wetland.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-47-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	0	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	2	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-48-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	This railroad ditch wetland has low values for wildlife due to its juxtaposition with the CSX rail.
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-49-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-49-wet

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Prince William County Sampling Date: October 22, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-50-wet  
 Investigator(s): L. Eggering, W. Moorhead Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): Ditch Local relief (concave, convex, none): Concave Slope (%): 0-3%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.593618 Long: -77.258732 Datum: NAD-1983  
 Soil Map Unit Name: Urban land-Udorthents complex NWI classification: PEM

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>This is a long railroad ditch wetland. It generally flows to the south on the west side of the tracks and eventually terminates into 04-STR-02 then into a culvert. The wetland is dominated by obligate plants and wraps around a large cut through a hillside.</b> <b>Field Sheet: 04-A-WTL-13SP, wetland.</b>	

## HYDROLOGY

<b>Wetland Hydrology Indicators:</b>		<b>Secondary Indicators (minimum of two required)</b>	
Primary Indicators (minimum of one is required; check all that apply)			
<u>X</u> Surface Water (A1)	<u>    </u> Aquatic Fauna (B13)	<u>    </u> Surface Soil Cracks (B6)	
<u>    </u> High Water Table (A2)	<u>    </u> Marl Deposits (B15) ( <b>LRR U</b> )	<u>    </u> Sparsely Vegetated Concave Surface (B8)

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-50-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	Very low functional values for wildlife due to proximity to the rail.
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-50-wet

Linear railroad ditch wetland.

02-WTL-50-wet

Low quality RR ditch wetland.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:		
Remarks: <b>Appears to have been impounded (man made) by three small berms. One at the southern end, one midway, and one well upstream to the west (not in the study area). Surface water is in an almost imperceptible channel through the wetland. Upstream there is a more sizable pool of water. Area appears to receive seep water from adjacent uplands.</b>

Hydric soil present? Yes ☒ No ☐

Remarks: **These were likely upland soils that have reduced over time. Likely accelerated by impounding the swale.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-51-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 7

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-51-wet      Small berm in wetland.

02-WTL-51-wet      Berm and typical vegetation.

04-WTL-12-wet      Upper end of wetland.

04-WTL-12-wet      Wetland soils.

Remarks: **Area tidally affected. Deeper sands are much more gray with some silt in the core sample.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-52-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	2	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if observed):**  
 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes X No \_\_\_\_\_

Remarks: **Soil colors do not indicate depleted matrix until 10 inches. Area is adversely affected by tides, waves, and large storm events. Soils are generally unstable and easily denuded.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-53-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	3	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      9

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-53-wet      Fringe wetland showing shallow root system.

02-WTL-53-wet      Fringe wetland.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-54-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

Total Number of Dominant Species Across all Strata: 2 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 100.00% (A/B)

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>98</u>	x 1 = <u>98</u>
FACW species <u>10</u>	x 2 = <u>20</u>
FAC species <u>5</u>	x 3 = <u>15</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>113</u> (A)	<u>133</u> (B)

Prevalence Index = B/A = 1.18

**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0

       Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).

The wetland is 90+% rice cutgrass. It is a PEM wetland. Beavers have cut down many of the sweetgum on the wetland. There is almost no woody vegetation in the wetland. Lizards tail grows primarily in the flooded area near the upland boundary.

## SOIL

Sampling Point: **02-WTL-54-wet-2**

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)									
Depth (inches)	Matrix		Redox Features				Texture	Remarks	
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>			
0-2	2.5Y 3 / 1	100					silt loam	much organic matter	
2-12	2.5Y 5 / 1	95	10YR 5 / 8	5			silty clay loam		

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-55-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-55-wet      Aquia Creek fringe wetland.

02-WTL-55-wet      Adjacent upland data point.

02-WTL-55-wet      Edge of Aquia Creek.

02-WTL-55-wet      Typical habitat.

02-WTL-55-wet      Habitat in fringe wetland.

02-WTL-55-wet      Area under Aquia Creek bridge.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Stafford County Sampling Date: October 12, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-55-upl  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): convex Slope (%): 30%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.4240549 Long: -77.353745 Datum: NAD-1983  
 Soil Map Unit Name: Cut and fill land, adjacent to location is Sassafras fine sandy loam NWI classification: upland  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>    </u> No <u>X</u> Hydric Soil Present? Yes <u>X</u> No <u>    </u> Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Remarks: <b>This is the upland data point near the fringe wetland along Aquia Creek. Field Sheet 06-WTL-01-UP N01</b>

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-56-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-56-wet-1      Soil cores.

02-WTL-56-wet-1      Field team in upper end of wetland.

02-WTL-56-wet-1      Portion of wetland outside study area.

02-WTL-56-wet-1      Wetland outside the study area.

02-WTL-56-wet-1      Hillslope into the wetland.

02-WTL-56-wet-1      Small area extending northwest into study area.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA- Area 2 City/County: Stafford County Sampling Date: October 12, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-56-upl-1  
 Investigator(s): L. Eggering, W. Moorhead, D. Mitchell, K. Astrc Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): terrace Local relief (concave, convex, none): concave Slope (%): 10%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.419183 Long: -77.358837 Datum: NAD-1983  
 Soil Map Unit Name: Cut and fill land, Tidal marsh is located adjacent to data point NWI classification: Upland  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>    </u> No <u>X</u> Hydric Soil Present? Yes <u>    </u> No <u>X</u> Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Remarks: <b>This sample point is in the upland area south of 06-WTL-01-wet. The area is well drained, contains upland plants, and does not have the requisite wetland hydrology.</b>

 Depth (inches): \_\_\_\_\_

Hydric soil present?    Yes ☒    No ☐

Remarks: **Saturated, reduced soils. Soil part of larger wetland complex and backwater to the Potomac. Although the soil value and chroma are indicative of redox dark surface, there is an apparent lack of redoximorphic features. It is likely that the dark organic matter within the soil is masking some or all of the concentrations that may be present.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-56-wet-2

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-56-wet-4

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	2	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

Depth (inches):	_____		

Remarks: Soils strongly reduced.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-57-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):		Hydric soil present?	
Type:		Yes	No
Depth (inches):		<input checked="" type="checkbox"/>	<input type="checkbox"/>

Remarks: **The soil is darker in the upper layer, and becomes more gray with depth and becomes saturated and more gray with orange mottles.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-57-wet-2

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	2	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	3	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Stafford County Sampling Date: October 13, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-58-wet  
 Investigator(s): J. Budnik, W. Moorhead Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): valley/ depression Local relief (concave, convex, none): concave Slope (%): <1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.40598986 Long: -77.36392301 Datum: NAD-1983  
 Soil Map Unit Name: Sandy and clayey land, steep, Sassafras and Caroline materials NWI classification: PEM  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>This is a well established wetland between the railroad/pipeline ROW and the ridge to the east receives runoff from 06-STR-04 which runs through/under wetland. Field Sheet 06-WTL-03 WET.</b>	

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)

 Depth (inches): \_\_\_\_\_

Hydric soil present?      Yes ☒      No ☐

Remarks: **Soil is dark at top but becomes almost black at 9 inches deep and more sandy.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-58-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

Restrictive Layer (if observed):		Hydric soil present?	
Type:		Yes	<input checked="" type="checkbox"/>
Depth (inches):		No	<input type="checkbox"/>

Remarks: **Organic layer on surface becoming very reduced. Clay is holding water in the wetland.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-59-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

Remarks: <b>Soils are depleted below A horizon. Marginally wet, likely influenced by capillary action at fringe of wetland.</b>										

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Stafford County Sampling Date: August 11, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-60-wet  
 Investigator(s): L. Postaski & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Toe of ballast Local relief (concave, convex, none): Concave Slope (%): 0%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.386573 Long: -77.384111 Datum: NAD-1983  
 Soil Map Unit Name: Kempsville fine sandy loam, 2 to 6 percent slopes NWI classification: PSS

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>This wetland is located approximately 130 feet west from the parking lot of the Brooke VRE Station. Saturation is visible from aerial imagery.</b>	

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)		
<u>X</u> Surface Water (A1)	<u>    </u> Aquatic Fauna (B13)	<u>    </u> Surface Soil Cracks (B6)

Hydric soil present?      Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>									
Remarks: With a value of 4 or more and a chroma of 2 or less, soils are depleted 3-12 inches below surface. A strong hydrogen sulfide odor was observed.									

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-60-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>200</u> (A)	<u>540</u> (B)

Prevalence Index = B/A = 2.70

**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

X 2 - Dominance Test is >50%

X 3 - Prevalence Index is ≤3.0

       Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes X No       

Japanese stiltgrass dominates the herbaceous area in this wetland. The stiltgrass extends outside the wetland with less density. American beech helps to delineate the wetland boundary.

 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes ☒ No ☐

Remarks: **Wet sandy clay soils associated with seep area. Refusal likely due to bedrock at approximately 10 inches.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-61-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-61-wet

Wetland dominated by Japanese  
stiltgrass.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-62-wet

Project/Site: DC2RVA- Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score      7

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-62-wet

New road crossing west of wetland.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Hydric soil present?    Yes ☒    No ☐

Remarks:    **Soils are hydric with a higher gray color and bright orange mottles below 4 inches.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-63-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 4

Score	Potential to Provide Desirable Wetland Functions and Values

**Restrictive Layer (if observed):**  
 Type: clay  
 Depth (inches): 10

Hydric soil present? Yes X No       

Remarks: **This area has darker soils near surface transitioning to a gray colored fine sandy clay loam.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-64-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score 10

Score	Potential to Provide Desirable Wetland Functions and Values

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-66-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-66-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score 3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Stafford Sampling Date: August 11, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 02-WTL-66-wet-3  
 Investigator(s): L. Postaski & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Toe of ballast Local relief (concave, convex, none): Concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: S, MLRA: 149A Lat: 38.376702 Long: -77.397452 Datum: NAD-1983  
 Soil Map Unit Name: Caroline clay loam, 10 to 18 percent slopes, severely eroded NWI classification: PEM

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>This wetland is a railroad ditch with low functional value. Wetland extends both north and south, beyond the project limits of disturbance boundaries.</b>	

## HYDROLOGY

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-66-wet-3

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-67-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

☒ 3 - Prevalence Index is ≤3.0  
 Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

**Definitions of Four Vegetation Strata:**  
**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.  
**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-70-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:		
Remarks: <b>The side channel wetland receive fairly frequent overflow flooding from Potomac Creek. It would be regulated as a wetland instead of a stream because of the hydric soils and dense vegetation growing in the channel. Also, at normal creek levels, there is no flow through the side channel, just ponded water.</b>

Restrictive Layer (if observed):			
Type:			
Depth (inches):			
Hydric soil present?	Yes	<input checked="" type="checkbox"/>	No <input type="checkbox"/>

Remarks: **The side channel soils are clearly reducing. There is a lot more silt in the side channel when compared to the high stream terrace.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-71-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	Scores are lower due to disturbance from adjacent roadway and CSX operations.
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

**Hydrophytic Vegetation Indicators:**

☐ 1 -Rapid Test for Hydrophytic Vegetation

☐ 2 - Dominance Test is >50%

☐ 3 - Prevalence Index is ≤3.0

☐ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☐ No ☒

Remarks: (If observed, list morphological adaptations below).

**Survey plot is a the edge of gas ROW which eliminates most woody species, and it is on a high well drained stream terrace in the Potomac Creek floodplain.**

Hydric soil present? Yes ☒ No ☐

Remarks: **Soils are reducing in the seep. Disturbance in the gas ROW likely mixes the soils. Deeper soils are very gray.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-72-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      2

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-72-wet      Wetland soil.

02-WTL-72-wet      Disturbed portion in gas ROW.

02-WTL-72-wet      Buried culvert in upper end of wetland.

02-WTL-72-wet      Herbaceous seep.

02-WTL-72-wet      Seep facing northeast toward gas ROW.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-73-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score 3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

02-WTL-73-wet      Inundated portion of wetland.

02-WTL-73-wet      Area just south of platform.

02-WTL-73-wet      Herbicide damage in wetland.

02-WTL-73-wet      Wetland south of Leland Station.

02-WTL-73-wet      Railroad ditch wetland near Leland Station.

02-WTL-73-wet      Wetland soils.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-74-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	Depressional area has a lot of disturbance from CSX operations and the adjacent Leland Station operation.
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

Remarks: With a value of 4 or more and a chroma of 2 or less, soils are depleted 4-12 inches below surface.										

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-75-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      2

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

Field Observations:		
Surface water present? Yes <u>X</u> No <u>    </u> Depth (inches): <b>3</b>	Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Water table present? Yes <u>X</u> No <u>    </u> Depth (inches): surface		
Saturation present? Yes <u>X</u> No <u>    </u> Depth (inches): <b>surface</b> (includes capillary fringe)		
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:		
The iron deposits in the wetland here stained everything orange. It is not completely clear where the water is originating, but it is likely that it is seep water from the adjacent hillsides. The railroad is in a deep cut through a ridge with seep water on both sides of the ballast.

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):		Hydric soil present?	
Type:	_____	Yes	<input checked="" type="checkbox"/>
Depth (inches):	_____	No	_____

Remarks: **Soils are clearly reduced, and there is a significant amount of iron in the soils and surface water.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-76-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None

 Column totals \_\_\_\_\_ (A) \_\_\_\_\_ (B)  
 Prevalence Index = B/A = \_\_\_\_\_

**Hydrophytic Vegetation Indicators:**  
**X** 1 -Rapid Test for Hydrophytic Vegetation  
 \_\_\_\_\_ 2 - Dominance Test is >50%  
 \_\_\_\_\_ 3 - Prevalence Index is ≤3.0<sup>1</sup>  
 \_\_\_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

**Definitions of Four Vegetation Strata:**  
**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.  
**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes **X** No \_\_\_\_\_

Remarks: (If observed, list morphological adaptations below).

**No canopy present. Sphagnum moss present.**

## SOIL

Sampling Point: **02-WTL-77-wet**

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)								
Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc2		
0-2	10YR 3 / 4	100					Clay loam	
2-4	10YR 3 / 3	100					Clay loam	
4-12	10YR 6 / 3	90	10YR 5 / 6	10			Clay loam	

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains.      <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)		Indicators for Problematic Hydric Soils <sup>3</sup> :
<input type="checkbox"/> Histisol (A1)	<input type="checkbox"/> Polyvalue Below Surface (S8) (LRR S, T, U)	<input type="checkbox"/> 1 cm Muck (A9) (LRR O)
<input type="checkbox"/> Histic Epipedon (A2)	<input type="checkbox"/> Thin Dark Surface (S9) (LRR, S, T, U)	<input type="checkbox"/> 2 cm Muck (A10) (LRR S)
<input type="checkbox"/> Black Histic (A3)	<input type="checkbox"/> Loamy Mucky Mineral (F1) (LRR O)	<input type="checkbox"/> Reduced Vertic (F18) (outside MLRA 150A,B)
<input type="checkbox"/> Hydrogen Sulfide (A4)	<input type="checkbox"/> Loamy Gleyed Matrix (F2)	<input type="checkbox"/> Piedmont Floodplain Soils (F19) (LRR P, S, T)
<input type="checkbox"/> Stratified Layers (A5)	<input type="checkbox"/> Depleted Matrix (F3)	<input type="checkbox"/> Anomalous Bright Loamy Soils (F20)
<input type="checkbox"/> Organic Bodies (A6) (LRR P, T, U)	<input type="checkbox"/> Redox Dark Surface (F6)	<input type="checkbox"/> (MLRA 153B)

<input type="checkbox"/> Thick Dark Surface (A12)	<input type="checkbox"/> Iron-Manganese Masses (F12) (LRR O, P, T)	
<input type="checkbox"/> Coast Prairie Redox (A16) (MLRA 150A)	<input type="checkbox"/> Umbric Surface (F13) (LRR P, T, U)	
<input type="checkbox"/> Sandy Mucky Mineral (S1) (LRR O, S)	<input type="checkbox"/> Delta Ochric (F17) (MLRA 151)	
<input type="checkbox"/> Sandy Gleyed Matrix (S4)	<input type="checkbox"/> Reduced Vertic (F18) (MLRA 150A, 150B)	
<input type="checkbox"/> Sandy Redox (S5)	<input type="checkbox"/> Piedmont Floodplain Soils (F19) (MLRA 149A)	
<input type="checkbox"/> Stripped Matrix (S6)	<input type="checkbox"/> Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)	
<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)		

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if observed):**  
 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes ☒ No ☐

Remarks: Soils are saturated with surface water present in low-lying areas of the wetland. Soils are dark clay loam, lacking redoximorphic features in the upper 4 inches. Redoximorphic features may be masked by the dark chroma/value of the soil, or have not developed due to unstable/disturbed soils along the ephemeral channel.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-77-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 2 City/County: Stafford County Sampling Date: July 22, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 2-WTL-77-upl  
 Investigator(s): L. Postaski & R. Mangum Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Convex Slope (%): 10%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.342478 Long: -77.447642 Datum: NAD-1983  
 Soil Map Unit Name: Kempsville fine sandy loam, gravelly substratum, 10 to 18 percent slopes, eroded NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present? Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>	
Remarks: <b>Steep rise to railroad tracks is heavily vegetated.</b>	

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)		
<u>    </u> Surface Water (A1)	<u>    </u> Aquatic Fauna (B13)	<u>    </u> Surface Soil Cracks (B6)
<u>    </u> High Water Table (A2)	<u>    </u> Marl Deposits (B15) ( <b>LRR U</b> )	<u>    </u> Sparsely Vegetated Concave Surface (B8)
<u>    </u> Saturation (A3)	<u>    </u> Hydrogen Sulfide Odor (C1)	<u>    </u> Drainage Patterns (B10)
<u>    </u> Water Marks (B1)	<u>    </u> Oxidized Rhizospheres on Living Roots (C3)	<u>    </u> Moss Trim Lines (B16)
<u>    </u> Sediment Deposits (B2)	<u>    </u> Presence of Reduced Iron (C4)	<u>    </u> Dry-Season Water Table (C2)
<u>    </u> Drift Deposits (B3)	<u>    </u> Recent Iron Reduction in Tilled Soils (C6)	<u>    </u> Crayfish Burrows (C8)
<u>    </u> Algal Mat or Crust (B4)	<u>    </u> Thin Muck Surface (C7)	<u>    </u> Saturation Visible on Aerial Imagery (C9)
<u>    </u> Iron Deposits (B5)	<u>    </u> Other (Explain in Remarks)	<u>    </u> Geomorphic Position (D2)
<u>    </u> Inundation Visible on Aerial Imagery (B7)		<u>    </u> Shallow Aquitard (D3)
<u>    </u> Water-Stained Leaves (B9)		<u>    </u> FAC-Neutral Test (D5)
		<u>    </u> Sphagnum moss (D8) ( <b>LRR T, U</b> )
Field Observations:		Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>
Surface water present? Yes <u>    </u> No <u>X</u> Depth (inches): <u>    </u>		
Water table present? Yes <u>    </u> No <u>X</u> Depth (inches): <u>    </u>		
Saturation present? Yes <u>    </u> No <u>X</u> Depth (inches): <u>    </u> (includes capillary fringe)		
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:		
Remarks: <b>Area moderately well drained.</b>
