Hydric soil present? Yes ☒ No ☐

Remarks: The soils in this area were reduced, but there is active erosional features in the west side of the wetland.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-78-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

Prevalence Index = B/A = 3.22

**Hydrophytic Vegetation Indicators:**

   1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

   3 - Prevalence Index is ≤3.0

   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes X No

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-79-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      3

Score	Potential to Provide Desirable Wetland Functions and Values

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-80-wet-1

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):		Hydric soil present?	
Type: <u>clay</u>		Yes	<u>X</u>
Depth (inches): <u>15</u>		No	

Remarks: **Soil is very hydric. Becomes gleyed at approximately 12 inches deep. Clay layer is restrictive at about 12-15 inches.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-80-wet-2

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 02-WTL-81-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-01-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-02-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-02-wet

Sparsely vegetated understory.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Stafford County Sampling Date: August 10, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-02-upl  
 Investigator(s): L. Postaski & R. Mangum Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Convex Slope (%): 30%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.329742 Long: -77.449876 Datum: NAD-1983  
 Soil Map Unit Name: Alluvial land, sandy and gravelly NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present? Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>	
Remarks: <b>Sparsely vegetated area. Potentially an old road bed. Tire rutts present.</b>

<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)		

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):		Hydric soil present?	
Type:		Yes	<input checked="" type="checkbox"/>
Depth (inches):		No	<input type="checkbox"/>

Remarks: **Although the soil value and chroma are indicative of redox dark surface, there is an apparent lack of redoximorphic features. It is likely that the dark organic matter within the soil is masking some or all of the concentrations that may be present.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-03-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-04-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-05-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-05-wet

Typical habitat in wetland.

 \_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

**Definitions of Four Vegetation Strata:**  
**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.  
**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes \_\_\_ No **X**

Plot dominated by sericea lespedeza.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-06-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

<input type="checkbox"/> Sandy Mucky Mineral (S1) (LRR O, S)				<input type="checkbox"/> Delta Ochric (F17) (MLRA 151)					
<input type="checkbox"/> Sandy Gleyed Matrix (S4)				<input type="checkbox"/> Reduced Vertic (F18) (MLRA 150A, 150B)					
<input type="checkbox"/> Sandy Redox (S5)				<input type="checkbox"/> Piedmont Floodplain Soils (F19) (MLRA 149A)					
<input type="checkbox"/> Stripped Matrix (S6)				<input type="checkbox"/> Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)					
<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)									
Restrictive Layer (if observed):									
Type: _____									
Depth (inches): _____				Hydric soil present?		Yes <input checked="" type="checkbox"/>		No _____	
Remarks: Although the soil value and chroma are indicative of redox dark surface/depleted dark surface, there is an apparent lack of redoximorphic features, likely due to ground disturbance from pipeline ROW maintenance. The soils appear to be reducing, however.									

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-07-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-07-wet      Wetland vegetation and old powerline ROW.

<b>Restrictive Layer (if observed):</b>									
Type: _____									
Depth (inches): _____				Hydric soil present?		Yes <input checked="" type="checkbox"/>		No _____	
Remarks: Although the soil value and chroma are indicative of redox dark surface/depleted dark surface, there is an apparent lack of redoximorphic features, likely due to ground disturbance from pipeline ROW maintenance.									

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-08-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-08-wet

Wetland vegetation and saturation.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-09-wet-1

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-10-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across all Strata: 4 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 50.00% (A/B)

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>1</u>	x 2 = <u>2</u>
FAC species <u>86</u>	x 3 = <u>258</u>
FACU species <u>55</u>	x 4 = <u>220</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>142</u> (A)	<u>480</u> (B)

Prevalence Index = B/A = 3.38

**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

2 - Dominance Test is >50%

3 - Prevalence Index is ≤3.0<sup>1</sup>

   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes    No X

Remarks: (If observed, list morphological adaptations below).

**Mesic upland hardwood forest with red maple & sweet gum dominant.**

Remarks: The soils are dark. It is possible that the dark color of the soil is masking redox features.									

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-11-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-12-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-12-wet      runway.

03-WTL-12-wet      Wetland vegetation near base of Shannon

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-13-wet-1

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-13-wet-2

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-13-wet-3

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-14-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score 9

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-14-wet

Water stained leaves in PFO portion of the wetland.

03-WTL-14-wet

Bottomland hardwoods within wetland.

03-WTL-14-wet

Railroad ditch portion of wetland system.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Fredericksburg Sampling Date: July 22, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-14-upl  
 Investigator(s): L. Eggering & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): none Slope (%): 30%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.260793 Long: -77.450668 Datum: NAD-1983  
 Soil Map Unit Name: Wickham loam, 2 to 7 percent slopes NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No       
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>X</u>	
Remarks: <b>This upland data point is located between the bottomland hardwood and railroad ditch components of this wetland system. The wetland system is represented by two different polygons in GIS (03-WTL-14 and 03-WTL-15). The area is raised and does not have the requisite hydrology to be considered a wetland.</b>		

## HYDROLOGY

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-15-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score      9

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-15-wet

Water stained leaves in PFO portion of the wetland.

03-WTL-15-wet

Bottomland hardwoods within wetland.

03-WTL-15-wet

Railroad ditch portion of wetland system.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Fredericksburg Sampling Date: July 22, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-15-upl  
 Investigator(s): L. Eggering & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): none Slope (%): 30%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.260793 Long: -77.450668 Datum: NAD-1983  
 Soil Map Unit Name: Wickham loam, 2 to 7 percent slopes NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No       
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>X</u>	
Remarks: <b>This upland data point is located between the bottomland hardwood and railroad ditch components of this wetland system. The wetland system is represented by two different polygons in GIS (03-WTL-14 and 03-WTL-15). The area is raised and does not have the requisite hydrology to be considered a wetland.</b>		

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)		
<u>    </u> Surface Water (A1)	<u>    </u> Aquatic Fauna (B13)	<u>    </u> Surface Soil Cracks (B6)
<u>    </u> High Water Table (A2)	<u>    </u> Marl Deposits (B15) ( <b>LRR U</b> )	<u>    </u> Sparsely Vegetated Concave Surface (B8)
<u>    </u> Saturation (A3)	<u>    </u> Hydrogen Sulfide Odor (C1)	<u>    </u> Drainage Patterns (B10)

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania County Sampling Date: December 2, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-17-wet  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): Railroad ditch Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.213798 Long: -77.438262 Datum: NAD-1983  
 Soil Map Unit Name: Dystrochrepts-Udults complex NWI classification: PFO/PSS  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil X, or Hydrology X significantly disturbed? Yes Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u> Hydric Soil Present? Yes <u>    </u> No <u>X</u> Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Remarks: <b>This is a recent man-made stormwater pond and adjacent railroad ditch parallel to the CSX line. A small check dam (rip-rap) in the drainage swale appears to pond water up to 8 inches deep. Large trees have recently died and other growth indicates that this stormwater improvement probably occurred in the last 5-7 years. Since this is for stormwater purposes and there are no hydric soils it is likely not jurisdictional. During a December 16, 2015 field review with the USACE and VDEQ, the agencies requested that the boundary be extended to include an area that was filled with soil from adjacent hillside erosion.</b> Field Sheet 10-A-WTL-05 wetDP1	

## HYDROLOGY

Yes <u>X</u> No <u>    </u>
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:  Remarks: <b>The rip-rap check dam creates the small pond. Since the area has some upland vegetation in the bottom, it likely dries out quickly. Surface runoff comes from the railroad ditch to the south. If the rip-rap check dam were removed, the area would drain and would not pond water.</b>

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-17-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-18-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-19-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-20-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      2

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

Total Number of Dominant Species Across all Strata: 4 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 75.00% (A/B)

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>0</u> x 1 = <u>0</u>	
FACW species <u>0</u> x 2 = <u>0</u>	
FAC species <u>35</u> x 3 = <u>105</u>	
FACU species <u>0</u> x 4 = <u>0</u>	
UPL species <u>0</u> x 5 = <u>0</u>	
Column totals <u>35</u> (A)	<u>105</u> (B)

Prevalence Index = B/A = 3.00

**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0

       Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes X No       

Remarks: (If observed, list morphological adaptations below).

**Eroded hillslope dominated by pines.**

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if observed):**  
 Type: \_\_\_\_\_  
 Depth (inches): \_\_\_\_\_

Hydric soil present? Yes ☒ No ☐

Remarks: **Soils were borderline on the matrix colors, but since this is now the normal circumstances and since the soils are actively reducing, they would be considered hydric for purposes of the delineation.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-21-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

2 - Dominance Test is >50%

3 - Prevalence Index is ≤3.0

   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes    No X

Remarks: (If observed, list morphological adaptations below).

**Area to the north cutover within the past 10 years.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-22-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania County Sampling Date: December 1, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-23-wet  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): swale Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.189637 Long: -77.446206 Datum: NAD-1983

Soil Map Unit Name: Udorthents-Udifluvents complex, gently sloping NWI classification: PSS

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present?	Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>X</u> No <u>    </u>	
Remarks: <b>This is a broad flat swale that appears to connect to a wetland on the western side of the railroad. The wetland hydrology appears to be influenced by beaver activity.</b>		

## HYDROLOGY

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-23-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	3	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 10

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania County Sampling Date: December 1, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-24-wet  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): swale Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.189955 Long: -77.446663 Datum: NAD-1983  
 Soil Map Unit Name: Udorthents-Udifluvents complex NWI classification: PFO

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>This is a broad flat swale that intersects with Stream 1. Beavers have ponded the southern portion of the wetland causing the stream to become braided (cutting new channels). The upper portion, north of the culvert, may have some groundwater interaction as the soils are very depleted.</b> <b>Field Sheet 10-A-WTL-04 wetDP1.</b>

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-24-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	3	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 10

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-25-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      4

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-26-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania Sampling Date: December 2, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-27-wet  
 Investigator(s): D. Mitchell, M. Rockwell Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): floodplain Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.182007 Long: -77.453786 Datum: NAD-1983

Soil Map Unit Name: Udorthents-Udifluvents complex, gently sloping NWI classification: PSS

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u> Hydric Soil Present? Yes <u>X</u> No <u>    </u> Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Remarks: <b>This wetland is an alder thicket adjacent to Stream 5. The ground is saturated &amp; stream is braided through the alders. Wetland is close to the boundary of the alignment where it switches back to the west side of the tracks.</b> <b>Note: No photographs of this wetland.</b> <b>Field Sheet 10-B-WTL-11 wet #1.</b>	

## HYDROLOGY

Wetland Hydrology Indicators:	Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply) <u>X</u> Surface Water (A1) <u>    </u> Aquatic Fauna (B13) <u>X</u> High Water Table (A2) <u>    </u> Marl Deposits (B15) ( <b>LRR U</b> ) <u>X</u> Saturation (A3) <u>    </u> Hydrogen Sulfide Odor (C1) <u>    </u> Water Marks (B1) <u>    </u> Oxidized Rhizospheres on Living Roots (C3) <u>    </u> Sediment Deposits (B2) <u>    </u> Presence of Reduced Iron (C4) <u>    </u> Drift Deposits (B3) <u>    </u> Recent Iron Reduction in Tilled Soils (C6) <u>    </u> Algal Mat or Crust (B4) <u>    </u> Thin Muck Surface (C7) <u>    </u> Iron Deposits (B5) <u>    </u> Other (Explain in Remarks) <u>    </u> Inundation Visible on Aerial Imagery (B7) <u>    </u> Water-Stained Leaves (B9)	<u>    </u> Surface Soil Cracks (B6) <u>    </u> Sparsely Vegetated Concave Surface (B8) <u>    </u> Drainage Patterns (B10) <u>    </u> Moss Trim Lines (B16) <u>    </u> Dry-Season Water Table (C2) <u>    </u> Crayfish Burrows (C8) <u>    </u> Saturation Visible on Aerial Imagery (C9) <u>    </u> Geomorphic Position (D2) <u>    </u> Shallow Aquitard (D3) <u>    </u> FAC-Neutral Test (D5) <u>    </u> Sphagnum moss (D8) ( <b>LRR T, U</b> )
<b>Field Observations:</b> Surface water present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>0-12</u> Water table present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>surface</u> Saturation present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>surface</u> (includes capillary fringe)	<b>Wetland Hydrology Present? Yes <u>X</u> No <u>    </u></b>
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:	
Remarks: <b>Hydrology contributed by Stream 5 before it passes under CSX rail. Beaver activity is cause of braided nature of Stream 5 through the alders.</b>

 Soil Map Unit Name: Udorthents-Udifluvents complex NWI classification: PFO/PSS/PEM

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u> Hydric Soil Present? Yes <u>X</u> No <u>    </u> Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Remarks: <b>Wetland is a railroad ditch. It is emergent herbaceous/forested/scrub-shrub. It drains to the south, but poorly. It eventually transitions into a dry ditch.</b> <b>Field Sheet 10-A-WTL-08 wetDP1.</b>

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-28-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Score	Potential to Provide Desirable Wetland Functions and Values

UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>170</u> (A)	<u>410</u> (B)

 Prevalence Index = B/A = 2.41
**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0

       Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?**

Yes ☒ No       

Remarks: (If observed, list morphological adaptations below).

**Herbaceous layer primarily absent under alder thicket. Rushes and sedges in a few non-shaded areas.**

Remarks: **Soils were super saturated due to recent rains.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-29-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Restrictive Layer (if observed):									
Type: _____				Hydric soil present? Yes <input checked="" type="checkbox"/> No _____					
Depth (inches): _____									
Remarks: The sample point is in the gas right of way. The soils are likely disturbed from maintenance activities. The dark color of the soil is likely masking the redox features in the soil core.									

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-30-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score      7

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania Sampling Date: June 20, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-30-upl  
 Investigator(s): L. Eggering & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Elevated roadway Local relief (concave, convex, none): \_\_\_\_\_ Slope (%): 10%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.180127 Long: -77.454093 Datum: NAD-1983  
 Soil Map Unit Name: Udorthents-Udifluvents complex, gently sloping NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No \_\_\_\_\_ (If no, explain in Remarks.)  
 Are vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? No Are "normal circumstances" present? Yes X No \_\_\_\_\_  
 Are vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <u>X</u>	Is the Sampled Area within a Wetland? Yes _____ No <u>X</u>
Hydric Soil Present? Yes _____ No <u>X</u>	
Wetland Hydrology Present? Yes _____ No <u>X</u>	
Remarks: <b>This is an upland point near wetland 1a. It lacks hydrology and requist soils. Field Sheet: 6-B-WTL-3</b>

Hydric soil present? Yes ☒ No ☐

Remarks: **Soils are clearly reducing, but there is a lot of disturbance in this area from roadway/equipment activities.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-32-wet-1

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Caroline Sampling Date: June 20, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-32-wet-2  
 Investigator(s): L. Eggering Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Convex Slope (%): 0%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.176748 Long: -77.456899 Datum: NAD-1983  
 Soil Map Unit Name: Udorthents-Udifulvents complex, gently sloping NWI classification: PEM

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>This is another portion of the series of Claiborne Run wetlands in the floodplain. It will connect to previously delineated areas. The sample point lies between a maintained gas ROW and line of trees, then the CSX ballast.</b>  <b>Note: this wetland is part of Segment 10, and was one of the rework areas.</b>

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-32-wet-2

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-32-wet-2      Claiborne Run wetland.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-33-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: B-10-WTL-09

Project/Site: DC2RVA-Segment 10

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3	

Total Score     10

Total Number of Dominant Species Across all Strata: 2 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 50.00% (A/B)

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>0</u>	x 2 = <u>0</u>
FAC species <u>75</u>	x 3 = <u>225</u>
FACU species <u>2</u>	x 4 = <u>8</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>77</u> (A)	<u>233</u> (B)

 Prevalence Index = B/A = 3.03
**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

2 - Dominance Test is >50%

3 - Prevalence Index is ≤3.0

   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?**

Yes    No X

Remarks: (If observed, list morphological adaptations below).

**Vegetation described is found in a narrow strip of PFO between railroad ballast and gas line corridor. Vegetation in gas line corridor is highly disturbed.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-35-wet-2

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-36-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score 2

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-37-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-38-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-39-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor

**Dominance Test worksheet:**

Number of Dominant Species That Are OBL, FACW, or FAC: 5 (A)

Total Number of Dominant Species Across all Strata: 7 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 71.43% (A/B)

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>0</u>	x 2 = <u>0</u>
FAC species <u>100</u>	x 3 = <u>300</u>
FACU species <u>20</u>	x 4 = <u>80</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>120</u> (A)	<u>380</u> (B)

Prevalence Index = B/A = 3.17

**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

3 - Prevalence Index is ≤3.0

       Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes X No       

Remarks: (If observed, list morphological adaptations below).

**Eastern red cedar and flowering dogwood are present in upland area and not in wetland.**

## SOIL

Sampling Point: **03-WTL-39-upl**

Restrictive Layer (if observed):									
Type: _____									
Depth (inches): _____ Hydric soil present? Yes <u>  X  </u> No <u>      </u>									
Remarks: Reddish color present in B horizon. Reduction not present as seen in wetland.									

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Caroline Sampling Date: December 1, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-40-wet  
 Investigator(s): D. Mitchell, M. Rockwell Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): floodplain Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.160022 Long: -77.455803 Datum: NAD-1983  
 Soil Map Unit Name: Wehadkee silt loam, 0 to 2 percent slopes, frequently flooded NWI classification: PFO  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u> Hydric Soil Present? Yes <u>X</u> No <u>    </u> Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Remarks: <b>This primarily bottomland hardwood wetland is north and south of Claiborne Crossing Road. It has strong hydrology indicators and hydric soils.</b> <b>Field Sheet 10-WTL-04-wet.</b>	

## HYDROLOGY

Wetland Hydrology Indicators:	Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply) <u>X</u> Surface Water (A1) <u>    </u> Aquatic Fauna (B13) <u>X</u> High Water Table (A2) <u>    </u> Marl Deposits (B15) ( <b>LRR U</b> ) <u>X</u> Saturation (A3) <u>    </u> Hydrogen Sulfide Odor (C1) <u>    </u> Water Marks (B1) <u>    </u> Oxidized Rhizospheres on Living Roots (C3) <u>    </u> Sediment Deposits (B2) <u>    </u> Presence of Reduced Iron (C4) <u>    </u> Drift Deposits (B3) <u>    </u> Recent Iron Reduction in Tilled Soils (C6) <u>    </u> Algal Mat or Crust (B4) <u>    </u> Thin Muck Surface (C7) <u>    </u> Iron Deposits (B5) <u>    </u> Other (Explain in Remarks) <u>    </u> Inundation Visible on Aerial Imagery (B7) <u>    </u> Water-Stained Leaves (B9)	<u>    </u> Surface Soil Cracks (B6) <u>    </u> Sparsely Vegetated Concave Surface (B8) <u>    </u> Drainage Patterns (B10) <u>    </u> Moss Trim Lines (B16) <u>    </u> Dry-Season Water Table (C2) <u>    </u> Crayfish Burrows (C8) <u>    </u> Saturation Visible on Aerial Imagery (C9) <u>    </u> Geomorphic Position (D2) <u>    </u> Shallow Aquitard (D3) <u>    </u> FAC-Neutral Test (D5) <u>    </u> Sphagnum moss (D8) ( <b>LRR T, U</b> )
<b>Field Observations:</b> Surface water present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>4 inches</u> Water table present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>surface</u> Saturation present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>surface</u> (includes capillary fringe)	<b>Wetland Hydrology Present? Yes <u>X</u> No <u>    </u></b>
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:	
Remarks: <b>Hydrology likely due to high water table. Claiborne Crossing Road acts as a dam separating wetland 4 &amp; 5. No culvert is present connecting the two, but hydrologic connection is likely.</b>

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-40-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-40-wet      Area south of Claiborne Crossing Road.

03-WTL-40-wet      Wetland north of Claiborne Crossing Road.

03-WTL-40-wet      Water marks and inundation in wetland.

**Dominance Test worksheet:**

Number of Dominant Species That Are OBL, FACW, or FAC: 5 (A)

Total Number of Dominant Species Across all Strata: 7 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 71.43% (A/B)

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>0</u> x 1 = <u>0</u>	
FACW species <u>0</u> x 2 = <u>0</u>	
FAC species <u>100</u> x 3 = <u>300</u>	
FACU species <u>20</u> x 4 = <u>80</u>	
UPL species <u>0</u> x 5 = <u>0</u>	
Column totals <u>120</u> (A)	<u>380</u> (B)

Prevalence Index = B/A = 3.17

**Hydrophytic Vegetation Indicators:**

   1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

   3 - Prevalence Index is ≤3.0

   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes X No   

Remarks: (If observed, list morphological adaptations below).

**Eastern red cedar and flowering dogwood are present in upland area and not in wetland.**

## SOIL

Sampling Point: **03-WTL-40-upl**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-41-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	2	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score     12

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-42-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

 Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**  
**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.  
**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).  
**No access to property.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-01-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

       Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

**Definitions of Four Vegetation Strata:**  
**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.  
**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Royal fern near the wetland margin.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-02-wet

Project/Site: DC2RVA-Area 2

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-02-wet

Sparsely vegetated understory.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Stafford County Sampling Date: October 15, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-03-wet  
 Investigator(s): D. Mitchell, M. Rockwell Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): stream terrace Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.329177 Long: -77.449259 Datum: NAD-1983  
 Soil Map Unit Name: Alluvial land, sandy and gravelly NWI classification: PEM  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>Very small herbaceous wetland north of Harrel Road.</b> <b>Field Sheet 06WTL10-wet01 Team 2.</b>	

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)		
<u>X</u> Surface Water (A1)	<u>    </u> Aquatic Fauna (B13)	<u>    </u> Surface Soil Cracks (B6)
<u>X</u> High Water Table (A2)	<u>    </u> Marl Deposits (B15) ( <b>LRR U</b> )	<u>    </u> Sparsely Vegetated Concave Surface (B8)
<u>X</u> Saturation (A3)	<u>    </u> Hydrogen Sulfide Odor (C1)	<u>    </u> Drainage Patterns (B10)
<u>    </u> Water Marks (B1)	<u>    </u> Oxidized Rhizospheres on Living Roots (C3)	<u>    </u> Moss Trim Lines (B16)
<u>    </u> Sediment Deposits (B2)	<u>    </u> Presence of Reduced Iron (C4)	<u>    </u> Dry-Season Water Table (C2)
<u>    </u> Drift Deposits (B3)	<u>    </u> Recent Iron Reduction in Tilled Soils (C6)	<u>    </u> Crayfish Burrows (C8)
<u>    </u> Algal Mat or Crust (B4)	<u>    </u> Thin Muck Surface (C7)	<u>    </u> Saturation Visible on Aerial Imagery (C9)
<u>    </u> Iron Deposits (B5)	<u>    </u> Other (Explain in Remarks)	<u>    </u> Geomorphic Position (D2)
<u>    </u> Inundation Visible on Aerial Imagery (B7)		<u>    </u> Shallow Aquitard (D3)
<u>    </u> Water-Stained Leaves (B9)		<u>    </u> FAC-Neutral Test (D5)
		<u>    </u> Sphagnum moss (D8) ( <b>LRR T, U</b> )
Field Observations:		
Surface water present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>&gt;2 inches</u>		
Water table present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>    </u>		
Saturation present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>    </u>		
(includes capillary fringe)	Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:		
Remarks: <b>Wetland is primarily saturated, but does have small pockets of inundation.</b>

<input type="checkbox"/> Sandy Gleyed Matrix (S4)	<input type="checkbox"/> Reduced Vertic (F18) (MLRA 150A, 150B)		
<input type="checkbox"/> Sandy Redox (S5)	<input type="checkbox"/> Piedmont Floodplain Soils (F19) (MLRA 149A)		
<input type="checkbox"/> Stripped Matrix (S6)	<input type="checkbox"/> Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)		
<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)			

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):		Hydric soil present?	
Type:		Yes	<input checked="" type="checkbox"/>
Depth (inches):		No	<input type="checkbox"/>

Remarks: **Although the soil value and chroma are indicative of redox dark surface, there is an apparent lack of redoximorphic features. It is likely that the dark organic matter within the soil is masking some or all of the concentrations that may be present.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-03-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-03-wet      Soil core.

03-WTL-03-wet      Very small herbaceous wetland.

03-WTL-03-wet      Herbaceous wetland.

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-04-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      2

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-05-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-05-wet

Typical habitat in wetland.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Stafford County Sampling Date: October 15, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-05-upl  
 Investigator(s): D. Mitchell, M. Rockwell Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): none Slope (%): 5%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.320268 Long: -77.449209 Datum: NAD-1983  
 Soil Map Unit Name: Alluvial land, sandy and gravelly NWI classification: upland  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil X, or Hydrology      significantly disturbed?      Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present? Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>	
Remarks: <b>This is the upland data sheet for wetland 9.</b> <b>Field Sheet 06WTL9-Up01 Team 2.</b>

Type: _____		Yes	No
Depth (inches): _____		<input checked="" type="checkbox"/>	<input type="checkbox"/>

Remarks: **Lots of organic matter in top 2 inches. Area somewhat disturbed because of gas ROW maintenance.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-06-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

<input type="checkbox"/> Sandy Redox (S5)				<input type="checkbox"/> Piedmont Floodplain Soils (F19) (MLRA 149A)					
<input type="checkbox"/> Stripped Matrix (S6)				<input type="checkbox"/> Anomalous Bright Loamy Soils (F20) (MLRA 149A, 153C, 153D)					
<input type="checkbox"/> Dark Surface (S7) (LRR P, S, T, U)									
Restrictive Layer (if observed):									
Type: _____									
Depth (inches): _____				Hydric soil present?		Yes <input checked="" type="checkbox"/>		No _____	
Remarks: Although the soil value and chroma are indicative of redox dark surface/depleted dark surface, there is an apparent lack of redoximorphic features, likely due to ground disturbance from pipeline ROW maintenance. The soils appear to be reducing, however.									

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-07-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      3

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Stafford Sampling Date: August 11, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-07-upl  
 Investigator(s): L. Postaski & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Convex Slope (%): 35%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.308186 Long: -77.446697 Datum: NAD-1983  
 Soil Map Unit Name: Wickham fine sandy loam, 2 to 6 percent slopes NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present? Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>	
Remarks: <b>The upland is close to the railroad ballast.</b>	

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)		
<u>    </u> Surface Water (A1)	<u>    </u> Aquatic Fauna (B13)	<u>    </u> Surface Soil Cracks (B6)

Remarks: <b>Although the soil value and chroma are indicative of redox dark surface/depleted dark surface, there is an apparent lack of redoximorphic features, likely due to ground disturbance from pipeline ROW maintenance.</b>									

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-08-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-09-wet-1

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-09-wet-2

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Fredericksburg Sampling Date: July 22, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-12-wet  
 Investigator(s): L. Eggering & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Toe of Ballast Local relief (concave, convex, none): Concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.26305 Long: -77.452785 Datum: NAD-1983  
 Soil Map Unit Name: Wickham loam, 2 to 7 percent slopes NWI classification: PFO

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present? Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	
Remarks: <b>This wetland is a railroad ditch wetland that extends into a forested area north of the west end of the Shannon Airport runway. It becomes an ephemeral channel. The area appears to drain both north and east.</b>

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-12-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-12-wet runway.

03-WTL-12-wet Wetland vegetation near base of Shannon Airport runway.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-13-wet-1

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-13-wet-2

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3	

Total Score 11

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-13-wet-3

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	3	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-14-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score 9

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-14-wet

Water stained leaves in PFO portion of the wetland.

03-WTL-14-wet

Bottomland hardwoods within wetland.

03-WTL-14-wet

Railroad ditch portion of wetland system.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Fredericksburg Sampling Date: July 22, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-14-upl  
 Investigator(s): L. Eggering & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): none Slope (%): 30%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.260793 Long: -77.450668 Datum: NAD-1983  
 Soil Map Unit Name: Wickham loam, 2 to 7 percent slopes NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No       
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>X</u>	
Remarks: <b>This upland data point is located between the bottomland hardwood and railroad ditch components of this wetland system. The wetland system is represented by two different polygons in GIS (03-WTL-14 and 03-WTL-15). The area is raised and does not have the requisite hydrology to be considered a wetland.</b>		

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)

Railroad ditch portion of wetland system.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Fredericksburg Sampling Date: July 22, 2016  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-15-upl  
 Investigator(s): L. Eggering & R. Porath Section, Township, Range: N/A  
 Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): none Slope (%): 30%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.260793 Long: -77.450668 Datum: NAD-1983  
 Soil Map Unit Name: Wickham loam, 2 to 7 percent slopes NWI classification: Upland

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No       
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>X</u>	
Remarks: <b>This upland data point is located between the bottomland hardwood and railroad ditch components of this wetland system. The wetland system is represented by two different polygons in GIS (03-WTL-14 and 03-WTL-15). The area is raised and does not have the requisite hydrology to be considered a wetland.</b>		

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)		
<u>    </u> Surface Water (A1)	<u>    </u> Aquatic Fauna (B13)	<u>    </u> Surface Soil Cracks (B6)
<u>    </u> High Water Table (A2)	<u>    </u> Marl Deposits (B15) ( <b>LRR U</b> )	<u>    </u> Sparsely Vegetated Concave Surface (B8)
<u>    </u> Saturation (A3)	<u>    </u> Hydrogen Sulfide Odor (C1)	<u>    </u> Drainage Patterns (B10)
<u>    </u> Water Marks (B1)	<u>    </u> Oxidized Rhizospheres on Living Roots (C3)	<u>    </u> Moss Trim Lines (B16)
<u>    </u> Sediment Deposits (B2)	<u>    </u> Presence of Reduced Iron (C4)	<u>    </u> Dry-Season Water Table (C2)
<u>    </u> Drift Deposits (B3)	<u>    </u> Recent Iron Reduction in Tilled Soils (C6)	<u>    </u> Crayfish Burrows (C8)
<u>    </u> Algal Mat or Crust (B4)	<u>    </u> Thin Muck Surface (C7)	<u>    </u> Saturation Visible on Aerial Imagery (C9)
<u>    </u> Iron Deposits (B5)	<u>    </u> Other (Explain in Remarks)	<u>    </u> Geomorphic Position (D2)
<u>    </u> Inundation Visible on Aerial Imagery (B7)		<u>    </u> Shallow Aquitard (D3)
<u>    </u> Water-Stained Leaves (B9)		<u>    </u> FAC-Neutral Test (D5)
		<u>    </u> Sphagnum moss (D8) ( <b>LRR T, U</b> )
Field Observations:		Wetland Hydrology Present? Yes <u>    </u> No <u>X</u>
Surface water present? Yes <u>    </u> No <u>X</u>	Depth (inches): <u>    </u>	
Water table present? Yes <u>    </u> No <u>X</u>	Depth (inches): <u>    </u>	
Saturation present? Yes <u>    </u> No <u>X</u> (includes capillary fringe)	Depth (inches): <u>    </u>	
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:		
Remarks: <b>The area is located across from Boggy Gap. The upland point is on a raised area.</b>		

**VEGETATION (Four Strata) - Use scientific names of plants**

**Dominance Test worksheet:**

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across all Strata: 5 (B)

Percent of Dominant Species that are OBL, FACW, or FAC: 40.00% (A/B)

---

**Prevalence Index worksheet**

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>0</u>	x 2 = <u>0</u>
FAC species <u>65</u>	x 3 = <u>195</u>
FACU species <u>50</u>	x 4 = <u>200</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>115</u> (A)	<u>395</u> (B)

Prevalence Index = B/A = 3.43

**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

2 - Dominance Test is >50%

3 - Prevalence Index is ≤3.0<sup>1</sup>

   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

---

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

---

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

---

**Hydrophytic vegetation present?** Yes    No X

 Remarks: (If observed, list morphological adaptations below).  
**The area remains herbaceous due to railroad maintenance.**

## SOIL

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-16-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania County Sampling Date: December 2, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-17-wet  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): Railroad ditch Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.213798 Long: -77.438262 Datum: NAD-1983  
 Soil Map Unit Name: Dystrochrepts-Udults complex NWI classification: PFO/PSS  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil X, or Hydrology X significantly disturbed? Yes Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u> Hydric Soil Present? Yes <u>    </u> No <u>X</u> Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Remarks: <b>This is a recent man-made stormwater pond and adjacent railroad ditch parallel to the CSX line. A small check dam (rip-rap) in the drainage swale appears to pond water up to 8 inches deep. Large trees have recently died and other growth indicates that this stormwater improvement probably occurred in the last 5-7 years. Since this is for stormwater purposes and there are no hydric soils it is likely not jurisdictional. During a December 16, 2015 field review with the USACE and VDEQ, the agencies requested that the boundary be extended to include an area that was filled with soil from adjacent hillside erosion.</b> Field Sheet 10-A-WTL-05 wetDP1	

## HYDROLOGY

Wetland Hydrology Indicators:	Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply) <u>X</u> Surface Water (A1) <u>    </u> Aquatic Fauna (B13) <u>    </u> High Water Table (A2) <u>    </u> Marl Deposits (B15) ( <b>LRR U</b> ) <u>X</u> Saturation (A3) <u>    </u> Hydrogen Sulfide Odor (C1) <u>    </u> Water Marks (B1) <u>    </u> Oxidized Rhizospheres on Living Roots (C3) <u>    </u> Sediment Deposits (B2) <u>    </u> Presence of Reduced Iron (C4) <u>    </u> Drift Deposits (B3) <u>    </u> Recent Iron Reduction in Tilled Soils (C6) <u>    </u> Algal Mat or Crust (B4) <u>    </u> Thin Muck Surface (C7) <u>    </u> Iron Deposits (B5) <u>    </u> Other (Explain in Remarks) <u>    </u> Inundation Visible on Aerial Imagery (B7) <u>    </u> Water-Stained Leaves (B9)	<u>    </u> Surface Soil Cracks (B6) <u>    </u> Sparsely Vegetated Concave Surface (B8) <u>    </u> Drainage Patterns (B10) <u>    </u> Moss Trim Lines (B16) <u>    </u> Dry-Season Water Table (C2) <u>    </u> Crayfish Burrows (C8) <u>    </u> Saturation Visible on Aerial Imagery (C9) <u>    </u> Geomorphic Position (D2) <u>    </u> Shallow Aquitard (D3) <u>    </u> FAC-Neutral Test (D5) <u>    </u> Sphagnum moss (D8) ( <b>LRR T, U</b> )
<b>Field Observations:</b> Surface water present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>0-5</u> Water table present? Yes <u>    </u> No <u>X</u> Depth (inches): <u>    </u> Saturation present? Yes <u>X</u> No <u>    </u> Depth (inches): <u>surface</u> (includes capillary fringe)	Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:  Remarks: <b>The rip-rap check dam creates the small pond. Since the area has some upland vegetation in the bottom, it likely dries out quickly. Surface runoff comes from the railroad ditch to the south. If the rip-rap check dam were removed, the area would drain and would not pond water.</b>

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-17-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      3

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania County Sampling Date: December 2, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-18-wet  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): railroad ditch Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.210447 Long: -77.436997 Datum: NAD-1983  
 Soil Map Unit Name: Udorthents-Udifluvents complex NWI classification: PEM

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <u>X</u> No <u>    </u> Hydric Soil Present? Yes <u>    </u> No <u>X</u> Wetland Hydrology Present? Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Remarks: <b>This railroad ditch wetland has the requisite hydrology and vegetation and although the soils are not currently hydric, they are being actively reduced. This is now the normal circumstance and would likely be considered a wetland. This area connects to the eroded hillside referenced in the previous data sheet that was reviewed with the USACE and VDEQ on December 16, 2016.</b> <b>Field Sheet 10-A-WTL-06 wetDP1.</b>

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-18-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania County Sampling Date: December 1, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-19-upl  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): none Slope (%): 50%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.208271 Long: -77.436684 Datum: NAD-1983  
 Soil Map Unit Name: Dystrochrepts-Udults complex, steep NWI classification: upland  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>X</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>X</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>X</u>	
Remarks: <b>The upland point is on a well cut bank adjacent to 10-WTL-02. Soil would be typically well drained. It was raining at time of delineation.</b> <b>Field Sheet 10-A-WTL-02 updp1.</b>		

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)
Primary Indicators (minimum of one is required; check all that apply)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?**      Yes         No X

Remarks: (If observed, list morphological adaptations below).

**Understory nearly absent.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-20-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score      2

**Hydrophytic Vegetation Indicators:**

☐ 1 -Rapid Test for Hydrophytic Vegetation

☐ 2 - Dominance Test is >50%

☐ 3 - Prevalence Index is ≤3.0

☐ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☐ No ☒

Remarks: (If observed, list morphological adaptations below).

**Area to the north cutover within the past 10 years.**

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-22-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-23-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	3	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 10

Score	Potential to Provide Desirable Wetland Functions and Values
0	None

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: DC2RVA-Area 3 City/County: Spotsylvania County Sampling Date: December 1, 2015  
 Applicant/Owner: VDRPT State: VA Sampling Point: 03-WTL-24-wet  
 Investigator(s): L. Eggering, K. Astroth Section, Township, Range: NA  
 Landform (hillslope, terrace, etc.): swale Local relief (concave, convex, none): concave Slope (%): 1%  
 Subregion (LRR or MLRA): LRR: P, MLRA: 133A Lat: 38.189955 Long: -77.446663 Datum: NAD-1983

Soil Map Unit Name: Udorthents-Udifluvents complex NWI classification: PFO

Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present?	Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>X</u> No <u>    </u>	
Remarks: <b>This is a broad flat swale that intersects with Stream 1. Beavers have ponded the southern portion of the wetland causing the stream to become braided (cutting new channels). The upper portion, north of the culvert, may have some groundwater interaction as the soils are very depleted.</b> <b>Field Sheet 10-A-WTL-04 wetDP1.</b>

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-24-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	3	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 10

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-24-wet      Beaver dam at south end of wetland.

03-WTL-24-wet      View of area ponded by beaver activity at base of ballast.

03-WTL-24-wet      North end of wetland facing west.

03-WTL-24-wet      Culvert under railroad.

03-WTL-24-wet      Stream one ponded.

03-WTL-24-wet      Stream one ponded.

**Hydrophytic Vegetation Indicators:**

☐ 1 -Rapid Test for Hydrophytic Vegetation

☐ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0

☐ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?**

Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).

**Plants are adapted to the dry sandy soil conditions.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-25-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-26-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score 4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-26-wet      Inundated woolgrass in wetland.

Remarks: (If observed, list morphological adaptations below).  
**Herb layer nearly absent.**

**Dominance Test worksheet:**  
 Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)  
 Total Number of Dominant Species Across all Strata: 5 (B)  
 Percent of Dominant Species that are OBL, FACW, or FAC: 60.00% (A/B)

**Prevalence Index worksheet**  

Total % Cover of:	Multiply by:
OBL species <u>0</u> x 1 = <u>0</u>	
FACW species <u>4</u> x 2 = <u>8</u>	
FAC species <u>25</u> x 3 = <u>75</u>	
FACU species <u>80</u> x 4 = <u>320</u>	
UPL species <u>0</u> x 5 = <u>0</u>	
Column totals <u>109</u> (A)	<u>403</u> (B)

Prevalence Index = B/A = 3.70

**Hydrophytic Vegetation Indicators:**  
   1 -Rapid Test for Hydrophytic Vegetation  
  X   2 - Dominance Test is >50%  
   3 - Prevalence Index is ≤3.0  
   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**  
**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.  
**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes   X   No

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-28-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

Remarks: **Soils were super saturated due to recent rains.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-29-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      6

Score	Potential to Provide Desirable Wetland Functions and Values

<b>Restrictive Layer (if observed):</b>									
Type: _____									
Depth (inches): _____				Hydric soil present?		Yes <input checked="" type="checkbox"/>		No _____	
Remarks: The sample point is in the gas right of way. The soils are likely disturbed from maintenance activities. The dark color of the soil is likely masking the redox features in the soil core.									

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-30-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score      7

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

Hydric soil present? Yes ☒ No ☐

Remarks: **Soils are clearly reducing, but there is a lot of disturbance in this area from roadway/equipment activities.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-32-wet-1

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-32-wet-2

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-32-wet-2      Claiborne Run wetland.

03-WTL-32-wet-2      Habitat in Claiborne Run wetlands.

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: B-10-WTL-09

Project/Site: DC2RVA-Segment 10

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3	

Total Score     10

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-35-wet-2

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-36-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	0	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	0	

Total Score 2

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

FAC species <u>0</u>	x 3 = <u>0</u>
FACU species <u>5</u>	x 4 = <u>20</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column totals <u>5</u>	(A) <u>20</u> (B)

Prevalence Index = B/A = 4.00

**Hydrophytic Vegetation Indicators:**  
1 -Rapid Test for Hydrophytic Vegetation  
2 - Dominance Test is >50%  
3 - Prevalence Index is ≤3.0  
   Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

**Definitions of Four Vegetation Strata:**  
**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.  
**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes    No X

Remarks: (If observed, list morphological adaptations below).

**Few herbaceous plants present. One fairly large Virginia pine.**

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-37-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-38-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score      4

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-39-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-39-wet      Area south of Claiborne Crossing Road.

03-WTL-39-wet      Wetland north of Claiborne Crossing Road.

03-WTL-39-wet      Water marks and inundation in wetland.

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-40-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 6

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

03-WTL-40-wet      Area south of Claiborne Crossing Road.

03-WTL-40-wet      Wetland north of Claiborne Crossing Road.

03-WTL-40-wet      Water marks and inundation in wetland.

# WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 03-WTL-41-wet

Project/Site: DC2RVA-Area 3

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	2	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	2	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2

 Soil Map Unit Name: Altavista fine sandy loam, 2 to 6 percent slopes, very rarely flooded NWI classification: upland  
 Are climatic / hydrologic conditions on the site typical for this time of the year? Yes X No      (If no, explain in Remarks.)  
 Are vegetation     , Soil     , or Hydrology      significantly disturbed? No Are "normal circumstances" present? Yes X No       
 Are vegetation     , Soil     , or Hydrology      naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS– Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>X</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>X</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>X</u>	
Remarks: <b>This is an upland data sheet.</b> <b>Field Sheet 10-B-wetland01-upland.</b>		

## HYDROLOGY

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 04-WTL-02-wet-1

Project/Site: DC2RVA-Area 4

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3

3 - Prevalence Index is ≤3.0

       Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes X No       

Remarks: (If observed, list morphological adaptations below).

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 04-WTL-03-wet

Project/Site: DC2RVA-Area 4

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	3	

Total Score     10

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 04-WTL-04-wet

Project/Site: DC2RVA-Area 4

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	2	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	0	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	2	

Total Score 7

Score	Potential to Provide Desirable Wetland Functions and Values

**Hydrophytic Vegetation Indicators:**

1 -Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0<sup>1</sup>

         Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** - Woody plants, excluding vines 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/shrub** - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

**Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vines** - All woody vines greater than 3.28 ft in height.

**Hydrophytic vegetation present?** Yes ☒ No ☐

Remarks: (If observed, list morphological adaptations below).

## WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 04-WTL-05-wet

Project/Site: DC2RVA-Area 4

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	2	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	2	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	1	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	3	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	3	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	4

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 04-WTL-06-wet

Project/Site: DC2RVA-Area 4

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1	

Total Score 5

Score	Potential to Provide Desirable Wetland Functions and Values
0	None
1	Poor
2	Low
3	Moderate
4	High
5	Very High

# WETLAND FUNCTIONS & VALUES FORM

Wetland I.D.: 04-WTL-08-wet

Project/Site: DC2RVA-Area 4

Function/Value	Score	Comments
<b>Floodwater Alteration/Retention -</b> Considers the effectiveness (wetland size, water capacity in wetland, location in watershed, wetland juxtaposition, etc.) of the wetland in reducing flood damage and the flow of floodwaters by attenuation of floodwaters for prolonged periods following precipitation events.	1	
<b>Sediment, Nutrient, &amp; Toxicant Removal -</b> Considers the effectiveness (wetland configuration, vegetative cover, wetland size, etc.) of the wetland in reducing or preventing degradation of water quality by trapping sediments, excess nutrients, and toxicants.	1	
<b>Erosion Control and Stabilization -</b> Considers the effectiveness (vegetative cover, size, substrate, etc.) of the wetland in reducing erosion of stream channels or stream banks down gradient of the wetland, along shorelines if associated with a lake or tidally influenced water body, or within the wetland itself.	0	
<b>Wildlife Habitat (Terrestrial) -</b> Considers the effectiveness (wetland's size, connectivity with other habitats, wetland juxtaposition, human-caused disturbance, etc.) of the wetland to provide habitat for various types and populations of terrestrial animals.	1	
<b>Wildlife Habitat (Aquatic) -</b> Considers the effectiveness (wetland's size, substrate, water quality, wetland juxtaposition, human-caused disturbance, pollution, etc.) of the wetland to provide habitat for various types and populations of aquatic animals.	1	
<b>Visual Quality/Aesthetics -</b> Considers the visual and aesthetic qualities of the wetland.	1
