PREFACE

This is the thirty-fourth annual statistical report on rail-highway grade crossing accidents based upon reports of rail carriers filed pursuant to the Accident Reports Act of 1910 (as amended).

The primary purpose of this report is to direct attention to the hazards inherent at public grade crossings, and to provide a basis for formulation of regulations which would promote the safety of both rail and highway traffic at crossings.

Statistics recently compiled by the Bureau of Public Roads, Federal Highway Administration, show an increase of more than four million highway motor vehicle registrations compared with 1967. There was a decrease in the number of grade crossing accidents and in casualties, both killed and injured.

In 1968, 781 more crossings were "specially protected" as defined under "Classification of Crossings." There is no statistical evidence to indicate that the decrease in crossing accidents in 1968 was the result of any specific factor or combination of factors.

In reference to the tables shown in this report, it should be noted that only Tables A, B, C and Table 1 pertain to rail-highway grade crossing accidents of all kinds. All the other tables pertain to collisions involving motor vehicles, such as automobiles, buses, motortrucks and motorcycles.

SUMMARY

Rail-Highway Grade Crossing Accidents of All Kinds

In 1968, there were 3,816 crossing accidents involving pedestrians, automobiles, motortrucks, buses, motorcycles, and other vehicles or machines. The above accidents resulted in 1,546 deaths and 3,774 injuries, and show what is hopefully a decreasing trend in all three categories.

The following three tables show data for the ten-year period, 1959 - 1968.

Table A. Total number of accidents and casualties at rail-highway grade crossings

Year	No. of accidents	Killed	Injured
Average 1959-68	3,542	1,444	3,611
1959	3,075	1,203	3,247

Table C shows that with respect to deaths, the severity of crossing accidents in 1968 was slightly lower than in the preceding year. In the matter of injuries, the severity was slightly higher.

Grade Crossing Accidents Involving Motor Vehicles

Of the 3,816 crossing accidents of all kinds in 1968, 3,603 involved collisions between railroad movements and motor vehicles, and resulted in 1,448 deaths and 3,665 injuries. In 2,395 collisions, or 66.47 percent, trains struck motor vehicles, resulting in 1,089, or 75.20 percent, of the deaths and in 2,333, or 63.66 percent of the injuries. In the other 1,208 collisions, or 33.53 percent, motor vehicles struck the sides of train movements, resulting in 359, or 24.79 percent, of the deaths and in 1,332, or 36.34 percent, of the injuries.

The number of crossing accidents in 1968 involving collisions with motor vehicles show a decrease from 1967. In comparison with last year, there was also a decrease of 72 in the number of deaths and 61 in the number of injuries.

Table D. Number of crossing accidents involving motor vehicles, per million vehicles registered

Year	Number of accidents	Number of motor vehicles registered	Number of accidents per million vehicles registered

1967	3,733	98,942	37.7
1968	3,603	103,150	34.9

Types of Crossing Protection Provided

Of the 3,603 collisions, 1,580, or 43.85 percent, occurred at crossings which were specially protected by one of the following: Lowered gates, trainman, watchman, audible and visual signals, audible signals, or visible signals. The other 2,023, or 56.15 percent, occurred at crossings protected by signals or signs that did not indicate the approach of trains.

The latest available statistics show a total of 213,723 rail-highway crossings at grade. Of these crossings, 45,213, or 21.15 percent, were specially protected; 168,510, or 78.85 percent, were not specially protected.

Times and Weather Conditions Involved in Motor Vehicle Collisions

Of the 3,603 crossing collisions, 2,167, or 60.14 percent, occurred in daylight, and 1,436, or 39.86 percent, took place at night. There were 2,486 collisions, or 69.00 percent, in clear weather, and 1,117, or 31.00 percent, under cloudy or inclement weather conditions.

Types of Motor Vehicles Involved in Crossing Accidents

Of the 3,603 collisions between trains and motor vehicles, automobiles were involved in 2,818, or 78.21 percent; buses in 4, or 0.11 percent; motortrucks in 740, or 20.54 percent, and motorcycles in 41, or 1.14 percent.

DEFINITION OF TERMS

Classification of Accidents. A public rail-highway grade crossing accident is one which results in (a) a reportable casualty to a person or (b) in a collision or derailment of a train, locomotive, or car, or other train accident and in which there is more than \$750 damage to equipment, track, or roadbed.

Classification of Casualties. Reportable casualties are:

(a) Death of a person: A death resulting from an accident within 24 hours immediately following the accident is reportable as a fatality; if death occurs after the expiration of the 24-hour period, the casualty is reported as an injury and also as a subsequent fatality.

(b) Injury to a railroad employee if the injury is sufficient to incapacitate the injured persons from performing his or her duties for a period of more than 24 hours in the aggregate during the 10 days immediately following the accident. (Prior to January 1, 1961, the injury was not reportable unless the employee was incapacitated for a period of more than three days in the aggregate during the 10 days immediately following the accident).

(c) Injury to a person other than a railroad employee if the injury is sufficient to incapacitate the injured person from following his or her customary vocation or mode of life for a period of more than 24 hours in the aggregate during the 10 days immediately following the accident.

Classification of Crossings. A highway crossing comprises all the tracks within, or immediately adjacent to, the railroad right-of-way, owned or leased, at an intersection with the highway. Crossings with streets, avenues, and rural highways, are included. Only public crossings are covered. Highway crossings with industrial tracks only, not owned or leased by a railroad, are excluded.

The type of signaling device for restricting use of a crossing by trains, highway vehicles, or pedestrians determines whether the crossing is "specially protected" or "not specially protected." "Specially protected" crossings are those protected by: Gates operated 24 hours per day or less; trainmen; watchmen on duty 24 hours per day or less; or devices that indicate the approach of trains. Crossings "not specially protected" are those that merely indicate the proximity of a crossing by fixed signs, and those without stationary signs or other cautionary fixtures.

Classification of Persons. Persons using crossings as a continuation of a street or road are divided into two classes, "trespassers" and "non-trespassers." A person is not reported as a trespasser on a highway grade crossing unless the crossing is protected by gates, or other similar barriers, which were closed when the person went on the crossing, or unless the person attempted to pass over or under trains or cars at the crossing.

There are instances in which persons on trains may be killed or injured. Such persons may be classified as passengers, employees on duty, non-trespassers, or trespassers.
